

📁 Transcription Complète — Réunion Famsun × Maroc (Dr RAHALI / Sam)

Durée : ~1h35 | Langue : Français | Passages en chinois : en rouge avec traduction

00:00:00,460

Mike (Famsun)

Doctor, actually, uh, you know, my-- you, you send me a message request for all the sensor information. My colleague is still-

00:00:08,140

Sam (Consultant)

Exact.

00:00:08,150

Mike (Famsun)

-preparing this sensor information. I think he's able to give you maybe tomorrow or maximum after tomorrow, because we need to check with our IND guys to give us all the list.

00:00:20,820

Sam (Consultant)

D'accord.

00:00:21,300

Mike (Famsun)

D'accord.

00:00:21,900

Sam (Consultant)

You, you, you can, uh-

00:00:23,000

Mike (Famsun)

Oui.

00:00:23,160

Sam (Consultant)

-you can talk about, uh, um, um, uh, document, uh, you send me if you understand-

00:00:30,160

Mike (Famsun)

Oui.

00:00:30,330

Sam (Consultant)

-my, my, uh, inquiry.

00:00:32,380

Mike (Famsun)

Yeah, request.

00:00:33,220

Sam (Consultant)

Yeah. I, I understand. Yeah, I understand.

00:00:35,380

Mike (Famsun)

Oui, la documentation.

00:00:36,580

Sam (Consultant)

Votre...

00:00:37,720

Mike (Famsun)

Yes, yes. We will give you the-

00:00:39,680

Sam (Consultant)

L'instrument.

00:00:39,780

Mike (Famsun)

-documentation.

00:00:41,580

Sam (Consultant)

Yeah, instrument function description.

00:00:44,840

Mike (Famsun)

Yeah, yeah. It's, it's fine.

00:00:46,740

Sam (Consultant)

And, uh, you're gonna send it, uh, in a PDF format, right?

00:00:52,080

Mike (Famsun)

Uh, PDF yeah. Normally we send-

00:00:54,200

Sam (Consultant)

Oui.

00:00:54,350

Mike (Famsun)

-PDF. Yeah.

00:00:55,980

Sam (Consultant)

D'accord. Parfait.

00:00:58,100

Sam (Consultant)

All right. Are we still waiting for someone else?

00:01:02,020

Mike (Famsun)

Uh, one of my

00:01:04,760

Mike (Famsun)

colleague is coming, I think. Is, uh-

00:01:07,400

Sam (Consultant)

D'accord.

00:01:09,100

Mike (Famsun)

Okay, let me see.

00:01:22,460

Mike (Famsun)

Hmm.

00:01:24,640

Mike (Famsun)

I think one-- our technical guy is still waiting, waiting for...

00:01:29,560

Mike (Famsun)

Laissez-moi-

00:01:30,300

Sam (Consultant)

D'accord.

00:01:30,490

Mike (Famsun)

Let me call him.

00:01:32,400

Sam (Consultant)

Merci.

00:01:33,680

Collègue

Which time you come back in Morocco?

00:01:37,380

Mike (Famsun)

Uh, maybe in May.

00:01:40,400

Collègue

May. The first May or-

00:01:41,340

Mike (Famsun)

I'm not sure.

00:01:43,330

Collègue

Ou...

00:01:43,470

Mike (Famsun)

[chuckles] Middle May. May-- Or maybe end of the May. Because, uh, middle May we have, uh, we have a guest.

00:01:51,180

Mike (Famsun)

We have a guest, uh, from Morocco.

00:01:54,340

Collègue

Oh, okay.

00:01:55,300

Sam (Consultant)

Hmm.

00:01:58,140

Collègue

[inaudible]

00:01:59,240

Sam (Consultant)

So a new client?

00:02:01,880

Mike (Famsun)

Uh, yeah, it's a new client, but not for,

00:02:04,920

Mike (Famsun)

not for pet. It's a skin structure.

00:02:08,479

Collègue

For cat food. For cat food.

00:02:08,960

Sam (Consultant)

Oh, okay. [chuckles]

00:02:09,259

Mike (Famsun)

Not for pet.

00:02:11,360

Mike (Famsun)

Yeah. You know, after, after doctor invest pet food, other people hesitate. They say, "Oh, doctor already invest one powerful guy in Marrakech, invest pet food. We cannot do it."

00:02:27,060

Sam (Consultant)

[pires]

00:02:27,070

Mike (Famsun)
[chuckles] Yes.

00:02:31,560
Collègue
Uh, Nicola.

00:02:33,600
Collègue
Nicola.

00:02:34,630
Mike (Famsun)
[inaudible]

00:02:43,620
Sam (Consultant)
[inaudible]

00:02:46,450
Mike (Famsun)
[inaudible]

00:03:02,440
Collègue
[inaudible]

00:03:20,760
Mike (Famsun)
Uh, I think we can start, uh, doctor. No need to wait, uh-

00:03:58,820
Sam (Consultant)
D'accord, bien.

00:04:00,520
Mike (Famsun)
Oui, nous pouvons commencer.

00:04:00,900
Sam (Consultant)
Très bien. Allez-y.

00:04:03,040
Mike (Famsun)
Hmm.

00:04:04,640
Mike (Famsun)
So, uh, according to our last meeting, you know, actually for, for the air solution. For the warehouse air solution, our project is-

00:04:15,700
Sam (Consultant)
Oui.

00:04:15,710
Mike (Famsun)
-trying to, to get a price.

00:04:19,280
Mike (Famsun)
Obtenir un prix auprès de-

00:04:20,140
Sam (Consultant)
D'accord.

00:04:20,390
Mike (Famsun)
-some, some suppliers. Because this one we don't do and, uh, we don't have a solution. No money.

00:04:27,400
Mike (Famsun)
Et pour être-

00:04:27,900

Sam (Consultant)

D'accord.

00:04:27,909

Mike (Famsun)

-frank, this one I think doctor can-- as a, as a partner, you cannot put

00:04:33,780

Mike (Famsun)

directly on Famsun side hundred percent, really. Because we don't, we don't do this, uh, the air solution usually. Even in China, you know, the ten K solution. Some special company, they do this.

00:04:49,440

Mike (Famsun)

You get my point or no? We just, uh, Famsun as a, you know, solution provider, just we guarantee our equipment works. But anyway, as a, as a partner now we are checking the price. If it's a small price,

00:05:06,580

Mike (Famsun)

I think it's easy, but if it's a big price, we need to, uh, discuss

00:05:12,800

Mike (Famsun)

this, uh, this air solution. Like air conditioning.

00:05:15,680

Sam (Consultant)

D'accord.

00:05:16,020

Mike (Famsun)

Oui.

00:05:17,520

Sam (Consultant)

Uh, exactly. You need HVAC, right?

00:05:22,100

Mike (Famsun)

Yeah. Like, like this, yeah.

00:05:24,480

Sam (Consultant)

No HVAC system, right? Ventilation.

00:05:29,460

Mike (Famsun)

Yeah. Actually, I-- we check with some supplier. They, they do like, uh, like a water cooling, you know? With a water cooling for the warehouse.

00:05:41,700

Collègue

Water cooling?

00:05:42,420

Sam (Consultant)

No, no, no. I think you misunderstood probably.

00:05:46,120

Mike (Famsun)

Oui.

00:05:47,360

Sam (Consultant)

What we were talking about is how do we control

00:05:51,600

Sam (Consultant)

the temperature,

00:05:53,520

Sam (Consultant)

vous savez-

00:05:55,380

Mike (Famsun)

Oui.

00:05:55,690

Sam (Consultant)

-de l'entrepôt. D'accord ? Donc c'est comme la climatisation.

00:06:00,748

Mike (Famsun)

Oui.

00:06:01,038

Sam (Consultant)

Air conditioning.

00:06:01,188

Mike (Famsun)

It's not air conditioning. Yeah.

00:06:03,068

Sam (Consultant)

So, so the production line would not, would not be affected by the... Let's say when it's hot, it will not affect the product in the production line. Do you see what I'm saying?

00:06:19,208

Mike (Famsun)

Oui.

00:06:19,688

Sam (Consultant)

Okay, so-

00:06:20,048

Mike (Famsun)

So production line,

00:06:22,188

Mike (Famsun)

e-e-even it's hot, no problem. We don't have a problem for, for the hot temperature. Just I think you, you need to have a, you know, warehouse to...

00:06:33,008

Mike (Famsun)

Warehouse air conditioning. Because our machinery-

00:06:35,668

Sam (Consultant)

Exactement.

00:06:36,278

Mike (Famsun)

-not, not afraid of, uh, the hot temperature. We need to heat the material anyway with a very, very high temperature.

00:06:45,588

Sam (Consultant)

Okay, Mike, just so, so, so we can be clear here. You-- What you just said, you said even if it's hot, it will not affect the quality of the product, of the cable?

00:06:56,168

Mike (Famsun)

No, no, no. It's-- Yeah, yeah, it's not affect.

00:06:59,788

Sam (Consultant)

Okay. Can you explain me why?

00:07:04,308

Mike (Famsun)

Parce que nous-

00:07:04,828

Sam (Consultant)

Donc disons-

00:07:05,307

Mike (Famsun)

Our production line is very hot with the, with the steam, you know, before the dryer, even, uh, uh, even after the dryer, all the material-

00:07:14,408

Sam (Consultant)

Oui.

00:07:14,528

Mike (Famsun)

-is very hot. Is, is much, much hotter than the air temperature.

00:07:20,468

Sam (Consultant)

Okay. At what temperature does, does the cable comes out from the dryer?

00:07:26,268

Mike (Famsun)

From the dryer, I think around, uh, maybe sixty to eighty degrees. Depends on-

00:07:33,608

Sam (Consultant)

Si-

00:07:34,228

Mike (Famsun)

Uh, de-

00:07:34,668

Sam (Consultant)

D'accord.

00:07:34,908

Mike (Famsun)

Oui.

00:07:36,168

Sam (Consultant)

Okay. And then it goes to the, then it goes to the coating, uh, right?

00:07:41,388

Mike (Famsun)

Yeah. Coating also with the hot temperature. Yeah, with the hot cable.

00:07:44,748

Sam (Consultant)

It's vacuum. It's vacuum.

00:07:46,318

Mike (Famsun)

Yeah. We inject... Yeah.

00:07:49,248

Sam (Consultant)

Okay. And then when it comes out from the, uh, from the coating, at what temperature does it come out?

00:07:56,468

Mike (Famsun)

Euh,

00:07:57,888

Mike (Famsun)

from the-- It's-- I think a little bit lower than the, than the dryer. But not very big difference.

00:08:03,468

Sam (Consultant)

Give me, give me a range. Not a big difference. Give me a range. Like sixty-

00:08:07,458

Mike (Famsun)

Yeah, yeah. Not the...

00:08:09,448

Mike (Famsun)

No, no. Not-- I, I, I don't have the exact number. I, I think my colleague-

00:08:13,598

Sam (Consultant)

D'accord.

00:08:14,248

Mike (Famsun)

-uh, have this number. Yeah.

00:08:16,308

Sam (Consultant)

Okay. Uh, and then when it goes from the... When it goes, uh,

00:08:21,968

Sam (Consultant)

uh, to the cooling, it comes out at normal temperature from the cooling, right?

00:08:27,328

Mike (Famsun)

Yeah, yeah. Uh, it, it reduce maybe to, uh... Normally it's like, uh, ambient temperature, you know, like, uh, uh-

00:08:35,708

Sam (Consultant)

Température ambiante. D'accord.

00:08:37,548

Mike (Famsun)

Yeah, yeah.

00:08:37,888

Sam (Consultant)

Merci.

00:08:38,428

Mike (Famsun)

It's little bit, uh-

00:08:39,068

Sam (Consultant)

Let's say-

00:08:40,048

Mike (Famsun)

Maybe a little bit higher. A little bit higher than the ambient.

00:08:43,518

Sam (Consultant)

D'accord.

00:08:43,568

Mike (Famsun)

Ambient temperature. Yeah.

00:08:43,838

Sam (Consultant)

Let's say it's forty degrees in the warehouse,

00:08:47,908

Sam (Consultant)

all right?

00:08:48,208

Mike (Famsun)

Oui.

00:08:49,468

Mike (Famsun)

So this one also around the forty.

00:08:52,628

Sam (Consultant)

Okay. And it comes out at twenty-five. Don't you think it's gonna warm up while it's being, uh, packaged?

00:09:06,728

Mike (Famsun)

You mean the, the, the cable is forty degrees?

00:09:11,048

Sam (Consultant)

Okay. Cable comes out from the cooling, the cooling system at twenty-five, you said.

00:09:17,648

Sam (Consultant)

And it's, it's hot in the, in the warehouse. So the cable is gonna warm up, right? Because the environment is hot.

00:09:28,428

Mike (Famsun)

Uh, this one...

00:09:31,288

Mike (Famsun)

No, the, the temperature stay, not increase, I think, because it will stay like, uh-

00:09:36,338

Sam (Consultant)

Non.

00:09:36,338

Mike (Famsun)

-ambient temperature. It, it will not increase the temperature.

00:09:41,548

Sam (Consultant)

So unless, unless the packaging area is at the ambient temperature.

00:09:47,868

Mike (Famsun)

Oui.

00:09:49,568

Sam (Consultant)

All right. So now you understand our problem. Our problem, we have to make sure that our air conditioning system ventilation maintains the warehouse temperature, the ambient temperature, so do-- it will not affect, it will not affect the quality of the cable.

00:10:05,988

Mike (Famsun)

Yeah. Or we can... Another solution is, you know, we can do, I think for the, for the cooler, around the cooler, we can reduce the, the air temperature. Because, you know, we need the fresh air go through the cooler. If we-

00:10:20,208

Sam (Consultant)

Oui.

00:10:20,457

Mike (Famsun)

-inject the, the cold air to the cooler, this problem will be solved. Just this, uh, I think it's fine.

00:10:29,148

Mike (Famsun)

Because normally, uh,

00:10:31,628

Mike (Famsun)

normally we do, uh, as a normal air tempera-- uh, air go inside the cooler. But if the air is very, very hot, I think we need to cool, cool down the air.

00:10:41,488

Sam (Consultant)

How we're gonna cool down the air? With what?

00:10:46,768

Mike (Famsun)

Yeah, yeah. For the, for this one, we can have, uh, uh, we can-- we have a machine to-- like a filter, you know, to cool, cool down the air, then go to the cooler.

00:11:00,788
Mike (Famsun)
I, I will, I will ask my... I think my colleague is on. Let me see.

00:11:07,028
Sam (Consultant)
Yeah. Kevin is, uh-

00:11:09,588
Mike (Famsun)
[discussion en langue étrangère]

00:11:26,788
Sam (Consultant)
Oui.

00:11:27,348
Collègue 3
[discussion en langue étrangère]

00:11:31,647
Mike (Famsun)
[discussion en langue étrangère]

00:11:36,688

00:12:11,258
● **Zhou (Ingénieur CN)**
Chinois :
呃，就-就如果说着眼于这个，就是换温这个事情的话，就是说先把温度把它换一下嘛，对吧？

FER: Euh, si on se concentre sur la régulation de la température, on devrait d'abord régler la température, non ?

00:12:19,118
● **Mike (Famsun)**
Chinois :
对对对，人家就是那个冷却，冷却那边可以搞个那个。

FER: Oui oui oui, du côté du refroidissement, on peut y installer quelque chose.

00:12:25,018
● **Sam (Consultant)**
Chinois :
做隔间。

FER: Faire des compartiments.

00:12:27,838
● **Zhou (Ingénieur CN)**
Chinois :
是-是这样，是这样的老费啊，我-我们，我们之前给他，给他把-把，对，我们，我们之前给他把这个项目里面做过隔间，然后隔间的话，他是，他把，他把每个，每个隔间把，他把温度稍微，稍微控制一下，就是就相当于我，他上次的回复不是说了嘛，他不是控，他普通的那个商用的那个空调是没有办法达到要求的吧，他自己不是说了嘛，是啊。

FER: C'est comme ça, M. Fei. Nous avons déjà réalisé des compartiments pour ce projet. Chaque compartiment contrôlait légèrement la température. La dernière réponse disait que la climatisation commerciale ordinaire ne peut pas répondre aux exigences.

00:12:53,398
● **Mike (Famsun)**
Chinois :
那这个要-要这个。

FER Alors il faut utiliser ça.

00:12:54,578

● Zhou (Ingénieur CN)

CN Chinois :

对，他是。

FER Oui, c'est ça.

00:12:55,018

● Mike (Famsun)

CN Chinois :

相当于工厂用工业，工业空调吧，是吧？

FER Ça revient à utiliser une climatisation industrielle en usine, n'est-ce pas ?

00:12:58,218

● Zhou (Ingénieur CN)

CN Chinois :

对对对对。其实相当于，对，他上次，上次你截的那个图上面那个表格上面下面不是附录的嘛，就是说普通的那个商用的空调它是没有办法达到要求嘛，他不是说的这个意思嘛。

FER Oui oui oui. Dans le tableau de l'image capturée la dernière fois, il était indiqué que la climatisation commerciale ordinaire ne peut pas atteindre les exigences.

00:13:11,518

● Mike (Famsun)

CN Chinois :

嗯，其实我觉得商用空调也可以啊，为啥不行啊？你把那个冷科技这-这个全部把它封起来吧。

FER Hmm, je pense que la climatisation commerciale peut aussi fonctionner. Pourquoi pas ? Il suffit de fermer hermétiquement la zone de refroidissement.

00:13:19,058

● Zhou (Ingénieur CN)

CN Chinois :

对，这我们，我-我们正常的，对，我们正常的做法，像现在在国内一般的做法都是，都是这个用-用水啊，就是说用-用水冷却的办法，就是给，给每个需要降温的地方进行降温。

FER Oui, notre façon habituelle en Chine c'est d'utiliser le refroidissement par eau pour chaque zone qui en a besoin.

00:13:35,728

● Mike (Famsun)

CN Chinois :

哦，就是放几个水空调呗，是吧？然后把它隔起来。

FER Ah, il suffit de placer quelques climatiseurs à eau et de fermer la zone.

00:13:40,638

● Zhou (Ingénieur CN)

CN Chinois :

嗯，他要是不着急的话，我-我-我-我可以找一下这方面的资料给他看一眼。

FER Hmm, s'il n'est pas pressé, je peux chercher des documents sur le sujet pour les lui montrer.

00:13:49,178

● Zhou (Ingénieur CN)

CN Chinois :

你要是，你要是现在就找，就给。对对对，我来，我来找点资料给他，让他来看一下，看看行不行。

FER Si tu cherches maintenant, donne-les. Oui oui, je vais trouver des données pour qu'il les examine.

00:13:56,318

● Mike (Famsun)

CN Chinois :

呃，Sam and doctor。

FER Euh, Sam et le Docteur.

00:13:59,878

Sam (Consultant)

Yes , yes。

00:14:01,778

Mike (Famsun)

This one actually our designer said some area in China also they do the same. In the necessary area they choose the install the air cooling system. They close for example for the cooler they make a close room and install one-

00:14:19,518

Sam (Consultant)

Yeah。

00:14:19,757

Mike (Famsun)

Like a yeah like a cooler.

00:14:23,358
Sam (Consultant)
Yeah, yeah, I know.

00:14:24,618
Mike (Famsun)
In a yeah in a certain area.

00:14:27,798
Sam (Consultant)
Is it a certain area?

00:14:30,018
Mike (Famsun)
Yeah just cooler. We need to have a you know the air cooling.

00:14:34,938
Sam (Consultant)
But okay, do you, okay, do you have the blueprint

00:14:39,698
Sam (Consultant)
for each zone, let's say from raw materials to, to the packing packaging area to the, to the final goods to the storage. Do you have the zoning and the condition of temperature and pressure and humidity for each zone?

00:14:58,228
● **Mike (Famsun)**
🇨🇳 *Chinois :*
哦，我们这个周老师，这客户问我们有没有这每个区啊，比如说像原料接收啊。

🇫🇷 *Ah, M. Zhou, le client nous demande si nous avons des données pour chaque zone, comme la réception des matières premières...*

00:15:04,598
● **Zhou (Ingénieur CN)**
🇨🇳 *Chinois :*
对。

🇫🇷 *Oui.*

00:15:06,318
● **Mike (Famsun)**
🇨🇳 *Chinois :*
粉碎啊，就各个分区的这个理想的温度、湿度，有没有这样的数据啊？这个有吗？

🇫🇷 *Le broyage... avons-nous des données sur la température et l'humidité idéales pour chaque zone ?*

00:15:16,198
● **Zhou (Ingénieur CN)**
🇨🇳 *Chinois :*
这个就难了，这个之前，之前没做过这么详细。理论上做的话应该是从洁净区到，到非洁净区，应该是呃，呈现一个微正，微正压的状态。

🇫🇷 *C'est difficile, on n'a jamais fait ça de façon aussi détaillée avant. En théorie, de la zone propre à la zone non propre, il devrait y avoir une légère surpression positive.*

00:15:29,978
● **Mike (Famsun)**
🇨🇳 *Chinois :*
呈现什么，什么状态？

🇫🇷 *Présenter quel état ?*

00:15:32,858
● **Zhou (Ingénieur CN)**
🇨🇳 *Chinois :*
呈现一个微正，微正压的一个状态。

🇫🇷 *Une légère surpression positive.*

00:15:37,218
● **Mike (Famsun)**
🇨🇳 *Chinois :*
其实我感觉他这个，这个冷却这边可能成品仓这边有点问题，其他我觉得没有问题啊，其他有啥问题？

🇫🇷 *En fait, je pense que du côté du refroidissement et du stockage des produits finis, il y a peut-être un problème, mais pour le reste pas de problème.*

00:15:44,038
● **Zhou (Ingénieur CN)**
🇨🇳 *Chinois :*
我理解你，老费，我知道你的意思，我懂。关键他-他天天揪着这个事情不放，你知道吧，你劝不服他，你知道吧。还有。

🇫🇷 *Je te comprends, M. Fei. Mais lui, il revient là-dessus tous les jours et tu ne peux pas le convaincre autrement.*

00:15:53,478

● Mike (Famsun)

🇨🇳 Chinois :

对。

🇫🇷 Oui.

00:15:53,898

● Zhou (Ingénieur CN)

🇨🇳 Chinois :

他要，他要看到资料，他要看到资料，知道吧？劝不服他。

🇫🇷 Il veut voir des documents. On ne peut pas le convaincre autrement.

00:16:00,918

● Mike (Famsun)

🇨🇳 Chinois :

那我们不行，我们给他一个吧。你到时你-你-你整理一下。

🇫🇷 Alors on n'a pas le choix, on lui en fournit un. Tu le prépareras.

00:16:04,518

● Zhou (Ingénieur CN)

🇨🇳 Chinois :

我来，我来，我来找个，我来找个数据，或者找个资料给他，看看他-他-他-他对于这样的东西能不能，能不能满意，可以吗？好不好？

🇫🇷 Je vais trouver des données ou de la documentation pour lui et voir s'il est satisfait.

00:16:15,718

● Mike (Famsun)

🇨🇳 Chinois :

行啊行啊行啊。

🇫🇷 D'accord, d'accord, d'accord.

00:16:16,538

● Zhou (Ingénieur CN)

🇨🇳 Chinois :

或者，或者，对，或者我把那个图，他不是有图纸吗？我把图纸我给他分为区，我大概我标个温度给他，看看，然后通过什么样的办-办法来达到这个，来通过什么样的办法来达到这个温度，至于什么样的办法，他们自己去找吧，我告诉他，告诉他应该有办法。

🇫🇷 Ou bien, il a des plans, non ? Je divise le plan en zones, j'indique approximativement la température pour chaque zone et comment les atteindre.

00:16:33,278

● Mike (Famsun)

🇨🇳 Chinois :

我觉得原料，我觉得原料接收啊，粉碎混合这一块应该不要紧吧，这温度高一点低一点不要紧，对不对？

🇫🇷 Je pense que pour la réception des matières premières, le broyage et le mélange, la température n'a pas trop d'importance.

00:16:42,558

● Zhou (Ingénieur CN)

🇨🇳 Chinois :

你，我这么说吧，你阿根廷啊，跟摩洛哥，跟摩洛哥的温度是不是差不多？

🇫🇷 Laisse-moi te dire : la température en Argentine, c'est à peu près la même qu'au Maroc, non ?

00:16:47,798

● Mike (Famsun)

🇨🇳 Chinois :

差不多啊。

🇫🇷 À peu près.

00:16:49,918

● Zhou (Ingénieur CN)

🇨🇳 Chinois :

那你们，那-那你阿根廷的试跑场是怎么解决的？[笑]

🇫🇷 Alors comment avez-vous résolu ça dans votre site d'essai en Argentine ? [rires]

00:16:54,518

● Mike (Famsun)

🇨🇳 Chinois :

对，我们阿根廷好像它没有在那种特别热的地方，但这个客户它是在正好在摩洛哥特别热的地方，它跟阿根廷还不一样。阿根廷那边。对对对。

🇫🇷 Oui, notre site en Argentine n'est pas dans un endroit particulièrement chaud, mais ce client est justement dans une zone très chaude du Maroc.

00:17:07,258

● Zhou (Ingénieur CN)

🇨🇳 Chinois :

是这个原因。

🇫🇷 C'est la raison.

00:17:07,658

● Mike (Famsun)

 **Chinois :**

他说我选了个热的地方啊。

 *Il dit qu'il a choisi un endroit chaud !*

00:17:10,278

 **Zhou (Ingénieur CN)**

 **Chinois :**

[笑]

 *[rires]*

00:17:12,478

 **Zhou (Ingénieur CN)**

 **Chinois :**

没关系，如果说要降温的话。如果说要-要-要降温的话，其实，其实，其实国内的，国内上次我说的新风系统吧，是整体，整体来调控的，但是这样的话，就是说对于国内用整体调控的新风系统来做的话，其实，其实价格，价格划-划不来。对。

 *Pas de problème, si on veut refroidir. En Chine, le système de ventilation globale dont je parlais contrôle tout l'ensemble. Mais le prix serait trop élevé, ça ne vaut pas le coup.*

00:17:32,398

 **Mike (Famsun)**

 **Chinois :**

啊，太高了，我觉得它这个后期运营成本也很高，我觉得就把冷却这一部分我觉得是比较关键的，因为它要把这个是吧，你要把宠物粮要把它冷却到合适的温度，你不然这个热的话打包也不行，或者你这个热的东西你在那个料仓里面，在成品仓里面，它也会产生冷凝水啊或者啥的，估计也不太好。

 *Ah, trop cher, et les coûts d'exploitation ultérieurs seraient très élevés. Je pense que le refroidissement est la partie la plus critique, car il faut refroidir les aliments pour animaux à la bonne température. Sinon les produits chauds dans le silo génèrent de la condensation.*

00:17:54,518

 **Zhou (Ingénieur CN)**

 **Chinois :**

那个老费，我-我们，我们只推，我们只推荐环境温度大概做多少度合适，这样，这样推荐吧。

 *M. Fei, nous recommandons simplement quelle température ambiante est appropriée.*

00:18:02,738

 **Zhou (Ingénieur CN)**

 **Chinois :**

对，你-你无论怎么样，你对，你-你也不，你，人-人在里面操作，你-你，他也得有个温度范围，对吧？我们是推荐的。

 *Oui, de toute façon, les personnes qui travaillent à l'intérieur ont besoin d'une plage de température, n'est-ce pas ? C'est ce qu'on recommande.*

00:18:11,698

 **Mike (Famsun)**

 **Chinois :**

嗯。

 *Hmm.*

00:18:11,758

 **Zhou (Ingénieur CN)**

 **Chinois :**

就是说多-多少的环境温度合适。至于，至于这个。

 *C'est-à-dire quelle température ambiante est appropriée...*

00:18:15,668

 **Mike (Famsun)**

 **Chinois :**

给来个范围。

 *Donnez une plage.*

00:18:17,894

 **Zhou (Ingénieur CN)**

 **Chinois :**

对对对，至于内部的温度，我-我-我感觉我们没有必要给-给他说得太明，太明确。我们也不，我们也没办法说明确了。

 *Oui oui, quant à la température interne, je pense qu'on n'a pas besoin d'être trop précis. De toute façon on ne peut pas l'être.*

00:18:27,754

 **Zhou (Ingénieur CN)**

 **Chinois :**

好不好？

 *D'accord ?*

00:18:29,794

 **Mike (Famsun)**

 **Chinois :**

关键我告诉你，这个东西就弄到最后啊，客户肯定，他肯定说啊，你们这个当时设计的时候怎么没考虑，这个还是找我们算账，你知道吧？我是担心这个东西，你现在不给他很详细，我们还是要给一个方案的。

 *La chose importante c'est qu'à la fin, le client dira : 'Pourquoi n'avez-vous pas pris ça en compte lors de la conception ?' Il nous tiendra responsables. On doit quand même fournir un plan.*

00:18:45,794

● **Zhou (Ingénieur CN)**

 *Chinois :*

那你给，那，那你给他个方案，哦，这个东西，哦，那你，那我，那我反-反过来了。嗯。那我反过来，我-我-我难听一点，难听。

 *Alors tu lui donnes un plan... Laisse-moi prendre le contre-pied. Je vais dire quelque chose qui risque de ne pas plaire.*

00:18:57,874

● **Mike (Famsun)**

 *Chinois :*

你说。

 *Dis-le.*

00:18:59,954

● **Zhou (Ingénieur CN)**

 *Chinois :*

你-你-你-你这个电灯，我-我-我-我要不要给你设计到位？

 *Et l'éclairage électrique, est-ce que je dois aussi tout concevoir pour toi ?*

00:19:05,294

● **Mike (Famsun)**

 *Chinois :*

哪个？灯啊。

 *Lequel ? L'éclairage ?*

00:19:07,354

● **Zhou (Ingénieur CN)**

 *Chinois :*

对啊，你车间里面电灯是不是我也得给你设-设计到位。

 *Oui, l'éclairage dans l'atelier, est-ce que je dois aussi tout concevoir pour toi ?*

00:19:11,654

● **Mike (Famsun)**

 *Chinois :*

没有灯当时就谈了的，我们价格也给了，知道吧？这个我们当时也都。

 *L'éclairage avait déjà été discuté, on avait même donné un prix. Tout ça avait été traité.*

00:19:15,914

● **Zhou (Ingénieur CN)**

 *Chinois :*

我知道的。

 *Je sais.*

00:19:16,594

● **Mike (Famsun)**

 *Chinois :*

这些都谈过了，灯包括消防都谈了，就是当时让他们自己搞的嘛。

 *Tout ça a été discuté — l'éclairage et la sécurité incendie — c'était convenu qu'ils s'en occupent eux-mêmes.*

00:19:24,194

● **Mike (Famsun)**

 *Chinois :*

知道吧？

 *Tu vois ?*

00:19:24,574

● **Zhou (Ingénieur CN)**

 *Chinois :*

这么，这么，确实，确实。

 *Effectivement, effectivement.*

00:19:26,334

● **Mike (Famsun)**

 *Chinois :*

就是一开始其实怪，就怪什么啊，一开始我们没有谈清楚，你知道吧？也没，没说出-

 *En fait, le problème au départ c'est qu'on n'a pas clarifié les choses dès le début. On n'a pas mentionné...*

00:19:31,814

● **Zhou (Ingénieur CN)**

 *Chinois :*

这个温度，这个温度。

 *Cette question de température.*

00:19:32,814

● **Mike (Famsun)**

 *Chinois :*

环境温度深究，没-没-没有太考虑这一块，是不是？孙老师是吧？

La température ambiante, on n'y avait pas vraiment réfléchi, n'est-ce pas ? M. Sun ?

00:19:37,734

● **Sun Laoshi (Ingénieur CN)**

Chinois :

对。

Oui.

00:19:37,964

● **Mike (Famsun)**

Chinois :

没太考虑这一块。

On n'y avait pas trop pensé.

00:19:38,814

● **Sun Laoshi (Ingénieur CN)**

Chinois :

是，也没，也确实也没想到。

Oui, effectivement on n'y avait pas pensé.

00:19:41,294

● **Mike (Famsun)**

Chinois :

对，你如果。

Oui, si tu...

00:19:42,854

● **Sun Laoshi (Ingénieur CN)**

Chinois :

对。

Oui.

00:19:42,924

● **Mike (Famsun)**

Chinois :

对啊，你如果当初考虑了，我们跟客户谈一下啊，你这边可能要把温度降一下是吧？这个东西多少钱，啊，我们来做，或者你们做，那就没问题。关键是我们都没提，是这个问题。

Si on y avait pensé dès le début, on aurait parlé au client : 'Vous devrez peut-être réduire la température' — pas de problème. Le vrai problème c'est qu'on n'en a pas parlé du tout.

00:19:56,954

● **Mike (Famsun)**

Chinois :

那些灯啊啥他不会找我们的。你灯什么的，消防系统，包括什么实验室的设备，我们都跟他提了，那都他自己来搞。

Pour l'éclairage et autres, il ne nous tiendra pas responsables. L'éclairage, la sécurité incendie, les équipements de laboratoire — il devait s'en occuper lui-même.

00:20:06,854

● **Zhou (Ingénieur CN)**

Chinois :

那你这个，你现在这个东西不可能免费我给他做一个吧，这不可能的。

Pour ça, il est impossible que je lui fasse ça gratuitement.

00:20:11,374

● **Mike (Famsun)**

Chinois :

我知道，这个免费不免费，我们先把这个东西整出来，就是你得先把方案弄出来，就告诉咱们。

Je sais, gratuit ou non, on prépare d'abord le dossier — tu dois d'abord préparer le plan et nous le communiquer.

00:20:18,384

● **Zhou (Ingénieur CN)**

Chinois :

行。

D'accord.

00:20:18,454

● **Mike (Famsun)**

Chinois :

是这样那个方案，啊，多少钱，我们后面再说。

Pour le plan, le prix, on en parlera plus tard.

00:20:22,134

● **Mike (Famsun)**

Chinois :

如果他能承-承担嘛，那最好，不能承担，我们到时再商量一个解决办法。但是现在这边肯定也不是个事，因为他还是依赖我们，他不懂呀，是不是？

FER S'il peut se le permettre, tant mieux. Sinon, on cherchera une solution. Pour l'instant il dépend encore de nous, il ne comprend pas.

00:20:32,514

● Zhou (Ingénieur CN)

CHN Chinois :

了解，了解，了解。

FER Compris, compris, compris.

00:20:35,614

Mike (Famsun)

Uh, okay, Sam, uh, I discussed with-

00:20:38,534

Sun Laoshi (Ingénieur CN)

Oui.

00:20:38,543

Mike (Famsun)

...my colleague. Actually he cannot give the exact-

00:20:41,214

Sun Laoshi (Ingénieur CN)

Okay. Can you do me a favor? Ask, ask your, uh, your colleague to send me

00:20:48,474

Sun Laoshi (Ingénieur CN)

from raw material to the, to the final end of the pro-production line, the temperature of the input raw materials from extruder, how-- what temperature does it come out? What tempera-what temperature does it get into the dryer? What temperature does it come out from the dryer? What temperature does it get into the coating? What temperature does it come out from the coating? And what tempera-- uh, does it come out from the cooling? Step by step, each step of the process.

00:21:15,954

Mike (Famsun)

But, but, but Sam, I think for, for the input and output raw material, uh, I think before the, before the,

00:21:26,094

Mike (Famsun)

the cooler is not important because our machinery need high temperature definitely is much higher than the-

00:21:33,894

Sun Laoshi (Ingénieur CN)

Okay. Yes, I understand that.

00:21:36,334

Mike (Famsun)

Yeah. Just I-- my colleague can give you, for example, the ideal temperature for the keyboards.

00:21:41,734

Sun Laoshi (Ingénieur CN)

Oui.

00:21:41,954

Mike (Famsun)

After finished product, how much is the temperature? For example, in the storage bin of the finished product, how much we need the temperature. After the cooler, how much we-- is ideal temperature. Before the cooler is not important really.

00:21:57,554

Mike (Famsun)

The dryer, the, the coater, the extruder. For you really, this data not important. It's not important because-

00:22:05,414

Sun Laoshi (Ingénieur CN)

Pourquoi ?

00:22:05,534

Mike (Famsun)

...we need high temperature. We need high temperature.

00:22:08,714

Sun Laoshi (Ingénieur CN)

Okay, understand.

00:22:08,894

Mike (Famsun)

It's more than hundred degrees.

00:22:10,934

Sun Laoshi (Ingénieur CN)

I understand that. I understand.

00:22:12,894

Mike (Famsun)

Yeah, yeah, yeah. It's not important, this one.

00:22:19,634

Mike (Famsun)

Just after the cooler, because it's a finished product, we need to take care.

00:22:24,754

Sun Laoshi (Ingénieur CN)

Maximum two point, uh, uh-

00:22:27,834

Mike (Famsun)

Deux degrés.

00:22:28,314

Sun Laoshi (Ingénieur CN)

Two degrees up ambience temperature. Because if you, you go quickly in the packaging with the, the humidity, with the, the temperature higher two point am-ambience, uh, temperature ambience, you have a moisture after sto-- after in warehouse. You have DLC also delay for sale. Okay. Don't have one eight, uh, well, uh, 18 months. 18 months.

00:22:57,944

Mike (Famsun)

18 mois.

00:22:57,994

Sun Laoshi (Ingénieur CN)

And don't have 18 months. Okay.

00:23:00,014

Mike (Famsun)

Of shelf, uh-

00:23:00,554

Sun Laoshi (Ingénieur CN)

When you stock after with this-- when you, when you package, when you package with humidity or, or, or, uh, the, the, the, the, the, the, the [speaking native language].

00:23:14,044

Mike (Famsun)

[speaking native language]

00:23:14,044

Sun Laoshi (Ingénieur CN)

[speaking native language] With the higher temperature than, than ambience. Higher five, uh, seven. You must have two point, okay? And all area you must, uh, um, uh, look my WhatsApp, uh, Mike, you understand me in English. I send you now WhatsApp, uh, what my inquiry.

00:23:35,234

Sun Laoshi (Ingénieur CN)

Regardez mon WhatsApp.

00:23:37,474

Sun Laoshi (Ingénieur CN)

Uh, because I don't understand the, uh, uh, you don't pa-- talk about oxidation, about condensation or about, about, uh, uh,

00:23:49,494

Sun Laoshi (Ingénieur CN)

about, uh, uh, [speaking native language]

00:23:52,974

Mike (Famsun)

Euh, bactéries.

00:23:53,894

Sun Laoshi (Ingénieur CN)

No, not bacteria. [speaking native language]

00:23:57,734

Mike (Famsun)

Euh, humidité.

00:23:59,534

Sun Laoshi (Ingénieur CN)

Humidité. Humidité.

00:24:01,534

Mike (Famsun)

Mm. Uh, I'll tell him.

00:24:08,434

Sun Laoshi (Ingénieur CN)

Because this area is special. You know, you have...

00:24:15,754

Mike (Famsun)

Hmm. D'accord.

00:24:17,994

Mike (Famsun)

This one maybe we, uh, we invite one of our, uh...

00:24:24,922

● **Collègue CN**

Chinois :

能不能找一个这个比如说你懂点宠物料生产的这个~

Est-ce qu'on peut trouver quelqu'un qui connaît un peu la production d'aliments pour animaux...

00:24:28,782

● **Mike (Famsun)**

Chinois :

你说。

Dis-le.

00:24:29,222

● **Collègue CN**

Chinois :

这个专家，跟他们聊一下，是吧？因为说实话这东西它，我-我-我把这个他发在群里我给你看一下。很多东西可能还是跟生产实地相关的，比如说他说这个原料会不会就是盆化机边上啊，这个原料会不会受这个高温影响，这个这个什么乱七八糟的。

Un expert qui pourrait discuter avec eux ? Beaucoup de choses sont liées à la réalité de la production. Par exemple, les matières premières près du mélangeur pourraient-elles être affectées par la haute température ?

00:24:50,602

● **Collègue CN**

Chinois :

我觉得是不是找一个这个懂点生产的给他看一下，是吧？我觉得把他一些疑虑给他扫清楚嘛，他肯定还是有些疑虑现在。

Je pense qu'on devrait trouver quelqu'un qui connaît la production pour dissiper ses doutes.

00:25:04,882

Mike (Famsun)

D'accord, j'envoie votre message dans le groupe. Je pense que nous pourrions inviter quelqu'un d'expérimenté en production pour discuter avec vous et clarifier tous vos doutes.

00:25:24,122

Collègue CN

Okay.

00:25:24,402

Mike (Famsun)

Parce que notre ingénieur, M. Chu, s'occupe uniquement du processus, mais pour la production et les matières premières, nous ne sommes pas très sûrs.

00:25:40,622

Collègue CN

Okay, well, that's exactly what

00:25:43,042

Collègue CN

Dr RAHALI sent you in WhatsApp. That's our concern. So the environmental condition impact on the production.

00:25:52,342

Mike (Famsun)

Oui, il s'inquiète que l'environnement affecte la qualité des matières premières.

00:25:58,822

Collègue CN

Yes.

00:25:59,162

Mike (Famsun)

Mais pour certaines matières premières sensibles à la chaleur, notamment les vitamines, le stockage nécessite des conditions particulières.

00:26:07,622

Collègue CN

Yes.

00:26:07,642

Mike (Famsun)

Normally vitamins storage in the , in the air condition

00:26:12,282

Mike (Famsun)

room , you know , in the room with air conditioning. Maybe below twenty degrees like this.

00:26:24,542

Collègue CN

Avez-vous une solution pour ça ?

00:26:29,622

Mike (Famsun)

Oui, la solution c'est dans le stockage. Gardez une petite zone — les vitamines ne représentent pas une grande quantité.

00:26:38,302

Collègue CN

Yeah , I know , I know. Yeah , we figure-- okay , we figure this , we figure this out. We need a cooling area for vitamins and oils. Okay , uh , no oil-

00:26:51,002

Mike (Famsun)

Parce que certaines huiles peuvent être stockées dehors, au soleil.

00:26:56,102

Collègue CN

Dehors, oui.

00:26:57,882

Mike (Famsun)

Oui, oui, beaucoup d'huiles sont stockées dehors.

00:27:02,442

Collègue CN

Mais si les huiles sont chaudes, elles peuvent devenir plus fluides.

00:27:09,702

Mike (Famsun)

Uh , I think it's fine. For the oil is fine , but I will check with our-- because in , for example , in Saudi Arabia , I think-

00:27:17,282

Collègue CN

Yeah.

00:27:17,302

Mike (Famsun)

Tout le pays est très chaud, mais les réservoirs d'huile sont dehors. Oui, les réservoirs dehors.

00:27:25,602

Collègue CN

Okay , so , so , okay , your production engineer will uh , will uh , will join this meeting right now or you-

00:27:35,862

Mike (Famsun)

Non, non, nous devons peut-être inviter un de nos clients professionnel en production qui nous dira quelles parties nécessitent attention.

00:27:48,592

Collègue CN

Okay.

00:27:48,622

Mike (Famsun)

Oui. Mais à mon avis, pour la zone de refroidissement, la norme Famsun est normalement trois degrés au-dessus de la température ambiante. Pour faire moins comme deux virgule cinq ou deux, il faudra peut-être injecter de l'air frais plutôt que l'air ambiant.

00:28:13,482

Collègue CN

D'accord. Et il y a un autre problème : l'humidité, l'humidité relative, l'humidité.

00:28:22,542

Mike (Famsun)

L'humidité, c'est le séchoir qui s'en occupe. Le séchoir travaille à éliminer toute l'humidité.

00:28:29,202

Collègue CN

D'accord, j'ai une question sur le séchoir. Le séchoir dispose-t-il d'un capteur d'humidité ?

00:28:36,662

Mike (Famsun)

Le séchoir, oui, nous en avons un.

00:28:39,782

Collègue CN

Je ne l'ai pas vu.

00:28:40,562

Mike (Famsun)

Pour le séchoir, oui, après la production, vous devriez avoir un laboratoire pour vérifier tous les résultats. Vous ne pouvez pas vous fier uniquement au capteur.

00:28:54,502

Collègue CN

D'accord, y compris l'humidité dans la croquette ?

00:28:59,082

Mike (Famsun)

Euh, l'humidité.

00:29:02,962

● **Mike (Famsun)**

Chinois :

哎，我们那个有湿度传感器吗？烘干机。它不能测，它只能测这个空气的湿度吧，是吧？杜老师。

He, est-ce qu'on a un capteur d'humidité pour le séchoir ? Il ne peut pas mesurer l'humidité du produit, seulement l'humidité de l'air, n'est-ce pas ? M. Du ?

00:29:14,102

● **Du Laoshi (Ingénieur CN)**

Chinois :

呃，我先来。

Euh, je vais parler d'abord.

00:29:17,342

● **Du Laoshi (Ingénieur CN)**

Chinois :

以烘干我们就是这样的。

Pour le séchage, c'est ainsi.

00:29:19,982

● **Mike (Famsun)**

Chinois :

啊。

Ah.

00:29:22,462

● **Du Laoshi (Ingénieur CN)**

Chinois :

它，它需不需要有一个湿度传感器是吧？

Est-ce qu'il faut ou non un capteur d'humidité ?

00:29:25,422

● **Collègue CN**

Chinois :

我觉得它，我们其实-

Je pense que, en fait nous...

00:29:29,582

● **Du Laoshi (Ingénieur CN)**

Chinois :

它确实要加。

Il faut effectivement en ajouter un.

00:29:29,732

● **Collègue CN**

Chinois :

它也是，它只，它只能测这个，就是空气的这个湿度吧，它不能测这个，就是产品的湿度，对吧？

De même, il ne peut mesurer que l'humidité de l'air, pas l'humidité du produit, n'est-ce pas ?

00:29:38,862

● **Du Laoshi (Ingénieur CN)**

Chinois :

不能。

Non, il ne peut pas.

00:29:40,362

● **Du Laoshi (Ingénieur CN)**

Chinois :

对，不能测产品的湿度。测不，测不了。

Exact, il ne peut pas mesurer l'humidité du produit. Impossible.

00:29:43,062

Mike (Famsun)

Non, pour la croquette, l'humidité de la croquette doit normalement être testée en laboratoire.

00:29:52,042

Collègue CN

Oh , really ?

00:29:53,902

Mike (Famsun)

Yeah, yeah。Because the sensor cannot , you know , for the kibble , the moisture normally you should have a special , have a special equipment to extract all the moisture to see the percentage。You know , it's a , it's a complete-

00:30:11,602

Collègue CN

Yeah。

00:30:12,342

Mike (Famsun)

Le capteur ne peut mesurer que l'humidité de l'air. Il ne peut pas mesurer l'humidité interne des croquettes. Pour les croquettes, il faut un équipement de laboratoire spécial.

00:30:25,942

Collègue CN

Vous parlez de l'humidité dans la croquette. Si vous avez de l'humidité dans la croquette — je vais vous expliquer pourquoi avec un exemple. Peut-être que M. Sun peut interpréter pour moi.

00:30:40,142

Sun Laoshi (Ingénieur CN)

When you have the, the, the fat, the, the, the lipid, okay, with a higher temperature in the warehouse or, or in the warehouse or the ne- or near the extruder, okay. The, the, the-

00:30:52,202

Speaker 8

Oui.

00:30:52,272

Sun Laoshi (Ingénieur CN)

Liquid, uh, uh, will, uh, become very liquid. The lipid becomes-

00:30:56,922

Speaker 8

Yeah, yeah. It becomes more viscous, uh, liquid.

00:31:00,162

Sun Laoshi (Ingénieur CN)

Yeah, yeah. Okay. When you put it in the, the, the... When you put it in the, uh, uh, pre-extruder, okay, and you mix, and you put it in the extruder, the, the, the, the, uh-

00:31:12,002

Speaker 8

La croquette.

00:31:12,842

Sun Laoshi (Ingénieur CN)

The kibble. The kibble, it's not, uh, it's not, uh, completely, uh, correct. Okay. Because you push, uh... What? Yeah. Let me see.

00:31:20,422

Speaker 8

Yeah. It doesn't come out, uh-

00:31:22,342

Sun Laoshi (Ingénieur CN)

D'accord.

00:31:23,082

Speaker 8

Uh, uh, in the right, uh-

00:31:26,622

Sun Laoshi (Ingénieur CN)

It removes. It removes.

00:31:27,742

Speaker 8

Uh, yeah. It's, it's kind of like, uh, soft.

00:31:30,502

Sun Laoshi (Ingénieur CN)

Okay, okay. And when you go the, the extruder, you go in, in, in dryer. Okay. In dryer you have time for, for, for, uh, for drying. Okay. You have time. Okay. Uh, with Mikos. Okay. You have time, uh, for drying, but you don't know the, the, the, the kibble coming with the, uh, uh, humidity because, because the, because the, the, the lipid is not, is, uh, is, is, is, um, is, uh, upper, uh, liquid.

00:32:02,162

Speaker 8

Oui.

00:32:02,362

Sun Laoshi (Ingénieur CN)

Up liquid because temperature unpacks. Okay. The temperature. Arrive in dryer, you have maybe you have, uh, two minutes for dryer. Okay. When it come in dryer, dryer qui-- Um, um, um, uh, say the dryer.

00:32:19,222

Speaker 8

Le séchoir.

00:32:20,272

Sun Laoshi (Ingénieur CN)

The dryer, it just in, in the surface. Surface.

00:32:22,582

Speaker 8

Yeah. So the kibble is not completely dry. The moisture hasn't been-

00:32:27,452

Sun Laoshi (Ingénieur CN)

[on the phone] Not moisture.

00:32:29,622

Sun Laoshi (Ingénieur CN)

The lipid. The, the, the humidity inside.

00:32:33,402

Sun Laoshi (Ingénieur CN)

Yeah. Yeah. It's like the kibble is not completely dry, only on the surface, not inside. Okay. You, you, you, you stay... You m- you must do, you must do order in the dryer. You told him, "Okay, not two minutes, for example, five minutes." You must do five minutes because you have humidity in the, in, in, in, uh, in, inside.

00:32:53,582

Speaker 8

Inside, inside the, the kibble.

00:32:55,372

Sun Laoshi (Ingénieur CN)

The kibble. When you go for normal program, normal program, it go out dryer, it come in, in a, in a, in a, in a coating. Okay. The coating.

00:33:07,291

Speaker 8

Oh.

00:33:07,322

Sun Laoshi (Ingénieur CN)

The coat... Okay. You have a coat, uh, vacuum. In a vacuum. Okay. The vacuum, when you have also the Appeton product liquid, uh, powder. Yeah. Okay. With lot of temperature ambiance. Okay. Okay. But you, you, you... The, the spray, the vacuum, it just stay in sur-in, in the surface, the, the kibble, okay? And not until you enter the pocket. Okay. And you go after-

00:33:35,662

Speaker 8

Non.

00:33:35,902

Sun Laoshi (Ingénieur CN)

Humidité.

00:33:36,622

Speaker 8

Non.

00:33:37,042

Sun Laoshi (Ingénieur CN)

With the, with the...

00:33:41,402

Speaker 8

Uh, sticky.

00:33:42,322

Sun Laoshi (Ingénieur CN)

Sticky. Uh, the, the, the spray is just, uh, sticky. It's not correct, okay, in the, in the, in the, the kibble. And you go quickly in, in cooling. In cooling system. Cooling system you don't have idea about what, what you re- uh, what... It receive a problem. Okay. It's because it's not automatically, um, um, preventive and, uh, the system, uh, not pre-preventive. You have just th- th-this, this kind of pocket with humidity and no good spray. Okay. Is, uh, column, column, uh, uh,

00:34:18,422

Sun Laoshi (Ingénieur CN)

column.

00:34:19,082

Speaker 8

Collant.

00:34:20,682

Sun Laoshi (Ingénieur CN)

It's sticky. You have the sticky. You go quickly in the packing. You have a packing when you, when you look area packing, you look... You don't have ambient, am-ambient temperature security because you have humidity. You have also... It must, it must to, to, to, to close this area packings. If, because if you put this, this, this kibble, uh, with, with, with this problem, and you give it ambiance humidity, and, and you, you, you, you, you, you close the packaging, and you're putting this in the warehouse with the hot temperature, with... You don't have, uh, pet food. [laughs] You don't have, uh-

00:35:03,802

Speaker 8

Ah.

00:35:05,262

Sun Laoshi (Ingénieur CN)

You don't have pet food.

00:35:05,802

Speaker 8

Doctor, you know.

00:35:07,582

Speaker 8

Doctor, my idea, you know, because now everything is, uh, just our imagination. Why we don't do the practice, the production first, and we see. I, I believe if we solve the, the cooler, the cooling air problem, we don't have other issues, really. It's my experience. For extruder, dryer, the machine will adjust, and we will teach your engineer how to adjust.

00:35:34,222

Speaker 8

Okay, Mike-

00:35:35,322

Sun Laoshi (Ingénieur CN)

But, but what, uh, I want to adapt, but, but, uh, with system. Give me the system.

00:35:40,842

Speaker 8

Mike, Mike. We don't-

00:35:42,502

Sun Laoshi (Ingénieur CN)

Oui.

00:35:42,682

Speaker 8

We don't want to adjust things manually. We want to be ev- automated. Where you-

00:35:48,522

Sun Laoshi (Ingénieur CN)

Yeah, it's automated. Yeah.

00:35:50,762

Speaker 8

Ça va-

00:35:51,242

Sun Laoshi (Ingénieur CN)

Yeah, automated.

00:35:51,422

Speaker 8

Talk to the machine. Send, send, send the... Okay. It will tell the dryer, "Well, slow down." Uh, so the kibble will spend more time than dry to come out exactly like it's supposed to be. Do you see what I'm saying?

00:36:04,612

Sun Laoshi (Ingénieur CN)

Yeah, yeah. We-

00:36:04,672

Speaker 8

We don't want, we don't want manual things.

00:36:06,962

Sun Laoshi (Ingénieur CN)

We have this function.

00:36:07,442

Speaker 8

Écran tactile. Contactez le technicien.

00:36:09,082

Sun Laoshi (Ingénieur CN)

It's, it's automated.

00:36:09,452

Speaker 8

Slow down. We want-

00:36:11,102

Sun Laoshi (Ingénieur CN)

Yeah, same. It's, it's automated. This is automated.

00:36:14,022

Speaker 8

Automated. But we-

00:36:15,942

Sun Laoshi (Ingénieur CN)

Yeah, yeah. We will-

00:36:17,752

Speaker 8

It needs to read, it needs to read all the data, like outside temperature, uh, inside temperature with the machine, all the data points. Temperature, humidity, uh-

00:36:26,742

Sun Laoshi (Ingénieur CN)

Super.

00:36:27,702

Speaker 8

Steam pressure, and so on.

00:36:30,602

Speaker 8

So does your system do that?

00:36:32,062

Sun Laoshi (Ingénieur CN)

It's, uh...

00:36:33,882

Sun Laoshi (Ingénieur CN)

Le système-

00:36:34,862

Speaker 8

Refroidissement.

00:36:34,931

Sun Laoshi (Ingénieur CN)

Fait ça, mais le système, je vous le dis franchement, ne peut pas vérifier l'humidité des croquettes. Nous dirons à votre ingénieur comment vérifier.

00:36:46,630

Mike (Famsun)

The product come out of the dryer, which fun-- which status is good.

00:36:52,370

Mike (Famsun)

You need to-- your, your engineer also need to learn, you know.

00:36:57,030

Mike (Famsun)

You cannot, uh, rely everything, even the most, most, most advanced one.

00:37:02,370

Sam (Consultant)

[pires]

00:37:02,849

Mike (Famsun)

The pet food. You cannot rely everything on the machine. Yes, engineer should be, should be understand. They should understand how to operate the machine, how to adjust the machine, how to adjust the map-

00:37:15,850

Sam (Consultant)

D'accord.

00:37:15,870

Mike (Famsun)

How to adjust the, the speed.

00:37:18,830

Mike (Famsun)

Need to know. You need to understand. Yeah.

00:37:21,430

Sam (Consultant)

We understand, uh, I totally understand, but we want this to be automated.

00:37:26,830

Mike (Famsun)

Yeah, it's automated, Sam. It's automated.

00:37:29,200

Sam (Consultant)

D'accord.

00:37:29,230

Mike (Famsun)

Even you can save your formulation.

00:37:32,010

Mike (Famsun)

Yeah. For example-

00:37:33,230

Sam (Consultant)

D'accord.

00:37:33,490

Mike (Famsun)

Yeah, if you produce the cat...

00:37:36,410

Mike (Famsun)

You can save your formulation, save your setting, save your data. So sometime if you produce the same, you just, uh, you know,

00:37:45,250

Mike (Famsun)

input the same information. It's, uh, automated.

00:37:49,030

Sam (Consultant)

Okay. All right. And the moisture should be measured by, by our quality controller.

00:37:56,350

Mike (Famsun)

Yeah. The moisture, the item of the protein, the item of dry matter or fat. You should have a equipment to test. You cannot rely on the ma-- the machine, because the machine cannot break the pebbles to check out how much moisture inside.

00:38:13,690

Sam (Consultant)

Yeah, yeah, I understand that. I have moisture, the final [crosstalk] moisture, after you stop. Okay. That's the first.

00:38:22,470

Mike (Famsun)

Ah, doctor, I-- doctor, I, I tell you, don't, don't, uh, don't worry about this really, doctor. Sorry to interrupt. Don't worry about this.

00:38:33,330

Sam (Consultant)

Uh, the moisture-

00:38:33,880

Mike (Famsun)

Our engineer will teach your engineer how to adjust the dryer, how to adjust the extruder.

00:38:40,410

Mike (Famsun)

But it's not manual.

00:38:41,250

Sam (Consultant)

D'accord.

00:38:41,410

Mike (Famsun)

It's automatic. Yeah, automated. Our engineer will train your engineer.

00:38:44,840

Sam (Consultant)

Depuis le contrôle-

00:38:45,550

Mike (Famsun)

Oui, comment le faire.

00:38:46,940

Sam (Consultant)

From the control, from, from the control center, right?

00:38:51,090

Mike (Famsun)

Yeah, yeah. We have a control panel for the dryer. We have a control panel for extruder. We will teach you how to adjust. Yeah.

00:38:59,910

Sam (Consultant)

But we also have a control center where they see the whole process.

00:39:04,770

Mike (Famsun)

Yeah, you have sensor. You have temperature sensor, uh-

00:39:07,730

Sam (Consultant)

Pas capteur, centre.

00:39:10,770

Mike (Famsun)

Qu'est-ce que le centre ?

00:39:10,870

Sam (Consultant)

La salle de contrôle.

00:39:12,850

Sam (Consultant)

La salle de contrôle.

00:39:13,850

Mike (Famsun)

Yeah, yeah. You have a center. Yeah, yeah. A control center control also.

00:39:18,230

Mike (Famsun)

In the control

00:39:22,690

Mike (Famsun)

room.

00:39:22,920

Collègue CN

[bavardages en arrière-plan]

00:39:25,190

Mike (Famsun)

[rires]

00:39:26,710

Collègue CN

[rires]

00:39:26,959

Mike (Famsun)

[rires]

00:39:26,959

Collègue CN

[bavardages en arrière-plan]

00:40:57,890

Mike (Famsun)

D'accord.

00:41:25,310

● **Collègue CN**

🇨🇳 *Chinois :*

Customer掉线了。哎，客户

🇫🇷 *Le client s'est déconnecté. Hé, le client...*

00:41:34,730

● **Collègue CN**

🇨🇳 *Chinois :*

是不是掉线了？

FR Il s'est déconnecté ?

00:41:37,290

Sam (Consultant)

Hi, where is Mike?

00:41:39,190

● **Collègue CN**

CN Chinois :

魏老-魏老师掉线了。我-我找一下他，他可能接电话了还是干什么了。

FR M. Wei s'est déconnecté. Je vais le rechercher, il est peut-être en train de prendre un appel.

00:41:44,010

Mike (Famsun)

Maybe he's calling, someone calling in-

00:41:47,130

Sam (Consultant)

Okay. Okay. Okay. Let's wait for him. Thank you.

00:42:17,430

Mike (Famsun)

Hello?

00:42:21,270

Sam (Consultant)

I'm Mike.

00:42:22,210

Mike (Famsun)

My, my phone is out of power.

00:42:25,130

Sam (Consultant)

Pas de problème. [rires]

00:42:26,850

Mike (Famsun)

You are, you are, you know, very, uh, I think nervous about this, uh, because this is-- maybe this is new for you, but I'm sure our machinery can adjust, uh, very, very well.

00:42:41,150

Sam (Consultant)

No, no, I'm not nervous. I'm just concerned. That's it.

00:42:43,570

Mike (Famsun)

Yeah. No need to be concerned.

00:42:45,130

Sam (Consultant)

I just wanna make sure it, uh-

00:42:47,790

Mike (Famsun)

Before the-

00:42:48,390

Sam (Consultant)

I just wanna make sure.

00:42:49,530

Mike (Famsun)

Oui.

00:42:51,350

Mike (Famsun)

And the-Yes.

00:42:54,210

Sam (Consultant)

Okay, Mike.

00:42:55,290

Mike (Famsun)
Oui.

00:42:55,430
Sam (Consultant)
Mike.

00:42:57,590
Sam (Consultant)
Okay, now, now you re-- assure me, assure us, actually assure Dr RAHALI. He's, he's concerned more than me. [laughs]

00:43:06,530
Mike (Famsun)
I know doctor is very concerned.

00:43:08,650
Sam (Consultant)
Yeah. [laughs] You, you, you're assuring us that the, th-there should be any problem, okay?

00:43:15,370
Mike (Famsun)
Oui.

00:43:16,190
Sam (Consultant)
And now you said you found a company that, that, that can do the ventilation, uh, and, uh, cooling and everything, right?

00:43:27,790
Mike (Famsun)
Yeah. We, we are looking for this, uh, solution. But maybe from Morocco also we can find maybe.

00:43:34,290
Sam (Consultant)
Non.

00:43:35,170
Mike (Famsun)
Simple.

00:43:35,470
Sam (Consultant)
But it... Does, does that company

00:43:40,070
Sam (Consultant)
have experience in a pet food industry and in a production, in a manufacturer like, like pet food like yours, like Famsun equipment and so on?

00:43:50,670
Mike (Famsun)
Uh, no, no. This, uh, this air cooling, they just consider reduce the... You know, to refresh the air. Not for production anything, you know.

00:44:00,040
Sam (Consultant)
D'accord.

00:44:00,050
Mike (Famsun)
Don't produce anything. It's, uh, it's not very important for them.

00:44:06,030
Sam (Consultant)
Okay, but how they gonna do the, the design and how the, the... what they call them? The, the pipelines, how are they gonna design all that?

00:44:15,810
Mike (Famsun)
Uh, this one is, uh,

00:44:18,290
Mike (Famsun)
not clear now. Later we will find, uh... I think for us, yeah, I'm looking for the solution for the cooler. For the cooler, cooler part.

00:44:29,870

Mike (Famsun)

You get my point? For the cooler, maybe we, we close the area.

00:44:34,090

Sam (Consultant)

Mike.

00:44:34,270

Mike (Famsun)

Réduire le-

00:44:35,850

Sam (Consultant)

Mike, Mike, Mike.

00:44:38,680

Mike (Famsun)

Oui.

00:44:38,680

Sam (Consultant)

Mike. Mike, [in Arabic] Okay. Let me translate what Dr RAHALI just told me. He said he would like Famsun to tell us exactly from the beginning of the, uh, process to the end, you know, what, what, what, uh, what, uh, uh, uh,

00:45:31,130

Sam (Consultant)

temperature environment should be for each step. Okay? Because if we go to, uh, HVAC, uh, or air conditioning or, uh, company, they will not know. They're just gonna put so many, uh, so many... what do you call them? Uh,

00:45:49,750

Sam (Consultant)

the, the, the air cooling system all over the, the warehouse and, uh, just, uh, without understanding the process. If, if Famsun, if, uh, you guys tell us, "All right, this is the condition of the environment of the raw materials. This is the condition of the mixer. This is the condition around the extruder. This is the condition around the dryer, and this is the condition around the co-coating and cooling all the way to the end of the packaging area." So that's what exact-- That's what Dr RAHALI is asking for.

00:46:22,650

Mike (Famsun)

Okay. This one, uh, I ask my engineer, our engineer to mark in the map

00:46:28,630

Mike (Famsun)

in a different zone. We mark it to-

00:46:30,890

Sam (Consultant)

D'accord.

00:46:31,790

Mike (Famsun)

Yeah. Different zone, different temperature, and send to you.

00:46:35,650

Sam (Consultant)

D'accord.

00:46:36,270

Mike (Famsun)

Oui.

00:46:37,109

Sam (Consultant)

[en arabe]

00:46:41,780

Mike (Famsun)

Oui.

00:46:41,790

Sam (Consultant)

[en arabe]

00:46:55,770

Mike (Famsun)

Oui.

00:46:56,450

Sam (Consultant)

[in Arabic] Okay. So, uh, what Dr RAHALI just said, [clear throat] we want to read the temperature, humidity a-around each zoning, okay? Because we have like four, five zone in the production line. [in Arabic]

00:47:22,130

Mike (Famsun)

Hmm.

00:47:22,270

Sam (Consultant)

And how do we control the, the cooling system or air, air cooling system

00:47:29,090

Sam (Consultant)

where with the, with the readings, with sensors, not sensors around the machine, e-externals in the warehouse, so the Mikos system can read it and adjust automatically.

00:47:41,830

Sam (Consultant)

Does that make sense to you?

00:47:43,790

Mike (Famsun)

This one I think, uh, little bit hard because, uh, uh, it's many, many, many, many equipment. We cannot put every part. Uh,

00:47:55,150

Mike (Famsun)

and also even, even we put the sensor, we cannot, uh, adjust automatically. Just it can give you this, uh, data. How is the temperature. How

00:48:07,590

Mike (Famsun)

it adjust automatically.

00:48:09,010

Sam (Consultant)

[en arabe]

00:48:15,390

Sam (Consultant)

Okay. Uh, it looks like, uh, uh, on your website you have a software

00:48:21,010

Sam (Consultant)

that, that does that. Like a preventive, uh, uh, uh, it reads the, uh, from all the data

00:48:30,090

Sam (Consultant)

i-in-inside the machine and outside the m-- uh, and the, the, uh, warehouse and, uh, reacts quickly with some, uh, intelligence and adjust, uh, the production line. You have a Mikos TM something.

00:48:46,070

Sam (Consultant)

It's called Mikos TM.

00:48:46,590

Mike (Famsun)

Yeah. But it's not for temperature wise. It's not for temperature.

00:48:53,010

Sam (Consultant)

What is it for?

00:48:55,190

Mike (Famsun)

It's just for maybe increase the efficiency of the, you know, manage the data with your order like this. It's not, uh, for adjust the environment.

00:49:05,510

Mike (Famsun)

For environment, I don't think we have a solution with our software.

00:49:09,670

Sam (Consultant)

So you're saying your system is for like an ERP?

00:49:13,660

Mike (Famsun)

Yeah, like ERP or SAP to also, you know, uh, it's a management system more to increase-

00:49:21,510

Sam (Consultant)

No, no, we're talking-

00:49:22,590

Mike (Famsun)

...your efficiency.

00:49:23,180

Sam (Consultant)

No. Okay.

00:49:25,180

Sam (Consultant)

No. Is it an ERP or is it, uh, for the production line?

00:49:32,700

Mike (Famsun)

It's like a ERP. Also we have the like a twin, digital twin system. But this digital twin system also is not, is not for environment. This is not for environment.

00:49:44,420

Sam (Consultant)

D'accord.

00:49:45,240

Mike (Famsun)

Yeah. This is also for like e-efficiency, increase efficiency of production. No relation with the environment.

00:49:53,160

Sam (Consultant)

Yeah, I know. Okay, so i-it's like a twin, uh, what do you call it? Twin, uh,

00:49:58,640

Sam (Consultant)

twin, uh, factory or, uh, what? No. Digital twin factory.

00:50:03,400

Mike (Famsun)

Yeah. Digital twin. Also you can like review with your mobile phone like this, you know, at your home.

00:50:09,280

Sam (Consultant)

And you, and you can do simulations, right?

00:50:12,000

Mike (Famsun)

Yeah, but this one is not included in our scope. You know, it's another, another function. We need to... Yeah. I think for, for the moment, it's not necessary really.

00:50:23,640

Sam (Consultant)

Pourquoi ?

00:50:27,020

Mike (Famsun)

You know this one? I tell you frankly, if we-- because digital twin system also including many, many blocks, many, many... You need to know-- tell me which function you want,

00:50:38,860

Mike (Famsun)

which function, which, uh, purpose you want to reach,

00:50:43,080

Mike (Famsun)

and then we-

00:50:43,640

Sam (Consultant)

For optimization.

00:50:44,320

Mike (Famsun)

It's, it's priced by, uh, block, by module, module, you know, different module.

00:50:49,300

Mike (Famsun)

By different function.

00:50:51,400

Sam (Consultant)

Mike, it's for optimization.

00:50:54,240

Sam (Consultant)

That's for optimization.

00:50:57,420

Mike (Famsun)

Yeah. Optimization. Yes. It's like optimize-

00:51:00,160

Sam (Consultant)

D'accord.

00:51:01,280

Mike (Famsun)

To increase the efficiency. But this one I have to keep the price separately. I don't know, doctor. Later I give, okay, it's a half million dollar. Doctor say, "Oh, you are crazy. You are, you are not a partner." You are--

00:51:14,320

Mike (Famsun)

He angry, you know,

00:51:16,420

Mike (Famsun)

and you give me crazy high price.

00:51:20,660

Sam (Consultant)

Okay. Mike.

00:51:22,460

Mike (Famsun)

Oui.

00:51:22,580

Sam (Consultant)

That's what Dr RAHALI is asking for. He wants, uh, we, uh, the digital twin, uh, factory system for optimization, you know, in reducing energy and, uh, increasing quality of the cable. You know what I'm saying? So you said it's not included in the scope of work. You can talk, uh, separately with Dr RAHALI about that. Then-

00:51:49,340

Speaker 9

Simulation.

00:51:51,060

Sam (Consultant)

Non, non.

00:51:51,910

Speaker 9

[speaking foreign language]

00:51:56,980

Sam (Consultant)

Okay. So, so-

00:51:58,860

Speaker 9

[speaking foreign language]

00:52:00,320

Sam (Consultant)

So, Dr RAHALI-

00:52:01,140

Mike (Famsun)

[speaking foreign language]

00:52:19,140

Speaker 9

[speaking foreign language]

00:52:34,860

Mike (Famsun)

You know, uh, our engineer said, uh, normally this function we should, uh, uh, consider design from beginning. And for the modification, it's not that easy because all the, you know, all the, all the function normally is, is already fixed. The space to improve is not, uh, too much. And we have, uh, also we need to maybe, uh, redo the, all the control.

00:53:10,560

Sam (Consultant)

D'accord.

00:53:41,960

Speaker 9

[speaking foreign language]

00:55:05,490

Sam (Consultant)

[speaking foreign language]

00:55:09,450

Speaker 9

[speaking foreign language]

00:55:09,950

Sam (Consultant)

[speaking foreign language]

00:55:09,950

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:13,630

Mike (Famsun)

[speaking foreign language]

00:55:13,630

Speaker 9

[speaking foreign language]

00:55:41,090

Sam (Consultant)

Hey, Mike.

00:55:42,490

Mike (Famsun)

Hi, Sam.

00:55:44,310

Sam (Consultant)

Yeah. Okay. So

00:55:49,350

Sam (Consultant)

just to summarize.

00:55:51,770

Mike (Famsun)

Oui.

00:55:52,170

Sam (Consultant)

D'accord.

00:55:53,630

Sam (Consultant)

You said that

00:55:56,710

Sam (Consultant)

the,

00:55:58,370

Sam (Consultant)

the,

00:55:59,810

Sam (Consultant)

the production line will, will have no issues,

00:56:03,470

Sam (Consultant)

uh, of external temperature and so on, as, as long as we maintain ambient, uh, environment, uh, in the warehouse.

00:56:10,230

Mike (Famsun)

Yes. Yes, yes.

00:56:12,930

Sam (Consultant)

It, it is our responsibility to set up the system of air conditioning, right?

00:56:19,210

Mike (Famsun)

Yeah. It's, uh... Normally, yeah. It's, uh, your responsibility.

00:56:24,110

Sam (Consultant)

Okay. All right. Dr RAHALI said, can you at least give us some, uh, like, uh, some blueprints? This is the, this, well, this is the temperature and, uh, of this area, raw materials, uh, second zone, uh, extruder area, uh, dryer, cooling, packaging.

00:56:46,010

Sam (Consultant)

I know the finished goods. We know, uh, what we need to do. That's it. Don't worry about it. Okay?

00:56:51,360

Mike (Famsun)

D'accord.

00:56:51,410

Sam (Consultant)

So when, when we, when we talk to the company that's, that's gonna install the HVAC, we know exactly what to tell them. Do you see what I'm saying? Because what the-

00:57:02,300

Mike (Famsun)

Oh, okay.

00:57:02,300

Sam (Consultant)

... the consulting company, which you, you already know, I forgot in, uh, their name, Indigis, they already proposed a, a, a blueprint, but we're not sure if it's, uh, good or not, if it's adequate to, uh, to your, uh, to the, uh, to the factory.

00:57:19,350

Mike (Famsun)

Uh, they give a proposal for the HVAC system, right?

00:57:23,150

Sam (Consultant)

Yes. We have an HVAC proposal, but we're not... When, uh, uh, I don't think they did it for just a warehouse, not a factory. Just for the

building. [laughs] Do you understand?

00:57:35,339

Mike (Famsun)

Oh, okay.

00:57:35,630

Sam (Consultant)

They told us this. They, they thought it's like a warehouse, no machines inside.

00:57:41,370

Mike (Famsun)

Oh, okay.

00:57:42,950

Mike (Famsun)

So I, I ask my colleague to give you... We can mark in the map, in the drawing-

00:57:49,240

Sam (Consultant)

D'accord.

00:57:49,240

Mike (Famsun)

-where the temperature should be. Yeah. Uh-

00:57:51,750

Sam (Consultant)

Okay. By, by zone, right? For each area.

00:57:56,110

Mike (Famsun)

Yeah, yeah, by zone.

00:57:57,670

Sam (Consultant)

Thank you. So-

00:57:58,590

Mike (Famsun)

[speaking foreign language]

00:58:11,250

Sam (Consultant)

Okay. So that's one.

00:58:12,970

Mike (Famsun)

D'accord.

00:58:13,590

Sam (Consultant)

Second item. We, we went to the, uh, to the factory yesterday, myself and Dr RAHALI, and we walked through the whole production machine.

00:58:22,390

Sam (Consultant)

There is some stainless steel pipes from one, one machine to another, especially to the cooling area and coating.

00:58:31,270

Mike (Famsun)

Oui.

00:58:31,470

Sam (Consultant)

Do we need to isolate... Do you need to do some insulation? You, you brought up insulation in, in the previous meeting.

00:58:40,570

Mike (Famsun)

Insulation, I think for the, for the

00:58:46,290

Mike (Famsun)

cooler part, we need to do it, I think.

00:58:49,830

Sam (Consultant)

D'accord. Très bien.

00:58:51,530

Mike (Famsun)

Maybe also the, the steam, uh, steam piping also better we do because with the, uh, with the insulation, you know, we can, uh, maintain, maintain a good quality of the, the steam.

00:59:03,950

Sam (Consultant)

Exactly. That's what, that's what we want. That was-- That is our concern, quality. We want-- We don't want variations. We don't want...

00:59:13,230

Sam (Consultant)

We, we want to stay within a certain, uh, percentage range of quality control. You see what I'm saying?

00:59:19,950

Mike (Famsun)

Yeah. For the insulation also, yeah, I ask my colleague to give you-

00:59:24,670

Sam (Consultant)

D'accord.

00:59:24,710

Mike (Famsun)

Give you the-

00:59:26,090

Sam (Consultant)

Exactly. Now, now, now, now we are, we are understanding each other. We want quality. We, we don't want any, uh, surprises in the future. That's what we do. We do preventive risk.

00:59:38,470

Sam (Consultant)

You understand me?

00:59:40,170

Mike (Famsun)

Yeah. I got your problem.

00:59:41,300

Sam (Consultant)

Okay. Now you assure us that there shouldn't be any problem, but we want to ma-- we want an extra security layer on top of that.

00:59:49,250

Mike (Famsun)

Hmm. D'accord.

00:59:50,570

Sam (Consultant)

Okay. Now-

00:59:52,590

Mike (Famsun)

[speaking foreign language]

01:00:03,470

Sam (Consultant)

Uh, [speaking foreign language]

01:00:06,500

Mike (Famsun)

[speaking foreign language]

01:00:06,509

Sam (Consultant)

[speaking foreign language]

01:00:10,510

Mike (Famsun)

Okay. We continue.

01:00:13,410

Sam (Consultant)

Okay. So, uh, third point. Now we're gonna move on to the software. You said we don't need the simulator. That's what I need to understand, why we don't need it. If you want to do optimization efficiency, especially for energy and quality, you know what I'm saying? Uh, you said, uh, can you, can you tell me why we don't need it?

01:00:35,470

Mike (Famsun)

You know, not we don't need it.

01:00:35,900

Sam (Consultant)

Forget about the money.

01:00:36,910

Mike (Famsun)

We, we, we need to do in the beginning, you know, not now.

01:00:40,210

Sam (Consultant)

Oh.

01:00:41,150

Mike (Famsun)

Now is late. Yeah, it's late. And also digital twin, we just announced last year. It's not, uh-

01:00:47,950

Sam (Consultant)

I think it-

01:00:48,040

Mike (Famsun)

It's not, uh, yeah.

01:00:51,690

Sam (Consultant)

Ah, it's too late.

01:00:53,610

Mike (Famsun)

We just announced last year, you know. In the beginning, we don't have this digital twin.

01:00:59,050

Sam (Consultant)

Oh, it's just launched. Oh.

01:01:01,220

Mike (Famsun)

Yeah, it's a, it's a new, new thing. Yeah, it's a new, new item.

01:01:04,050

Sam (Consultant)

Oh, okay.

01:01:05,850

Mike (Famsun)

And the-

01:01:08,230

Sam (Consultant)

[speaking foreign language]

01:01:22,030

Sam (Consultant)

Okay. So what is the solution? Is it too late? We cannot sim-- uh, use your, uh, simulator for, uh, the existing, uh-

01:01:31,526

Speaker 8

Because this one teach not only the software, also hardware we need to consider.

01:01:37,286

Sam (Consultant)

D'accord.

01:01:38,206

Speaker 8

So we should-

01:01:38,446

Sam (Consultant)

D'accord.

01:01:38,806

Speaker 8

We should design this from the beginning.

01:01:41,926

Sam (Consultant)

I understand.

01:01:42,436

Speaker 8

Now is, uh... Yeah, it's very-

01:01:43,766

Sam (Consultant)

D'accord.

01:01:43,996

Speaker 8

-complicated now. Yeah.

01:01:45,626

Sam (Consultant)

It's, it-- Okay. Is it too late or is it feasible?

01:01:49,366

Speaker 8

It's too late.

01:01:51,386

Sam (Consultant)

So there is no-

01:01:52,626

Speaker 8

It's feasible. We need to, we need to do everything, uh, from beginning, you know.

01:01:57,766

Speaker 8

So it's not, uh, it's not feasible. It's not economic

01:02:01,366

Speaker 8

to change everything.

01:02:03,986

Sam (Consultant)

Say it again. I'm sorry.

01:02:06,506

Speaker 8

I mean, it's not, uh, it's not economic now to, you know, redesign and make everything from beginning. And I think we are ready also for production. We don't... We cannot, uh, waste too much time on this.

01:02:20,366

Sam (Consultant)

Does it take a lot of time to, to work, to do that?

01:02:23,766

Speaker 8

Even for the hardware, we need a lot of things to do for the hardware, not only software.

01:02:27,716

Sam (Consultant)

Yeah, understand you. Oh, okay.

01:02:29,186

Speaker 8

Yeah. Yeah, maybe it involve two, three months, the site works.

01:02:33,436

Sam (Consultant)

Oh, okay.

01:02:33,466

Speaker 8

To change the tables, install the, you know, uh, different, uh, I don't know, uh, different elements.

01:02:41,346

Sam (Consultant)

D'accord.

01:02:42,726

Speaker 8

Oui.

01:02:44,186

Sam (Consultant)

Continue.

01:02:44,506

Speaker 8

It's not a simple work, but if we do from beginning, it's quite easier, you know.

01:02:49,986

Sam (Consultant)

Okay. Let me, let me explain to Dr. Rahali, okay? Give me two minutes.

01:02:54,166

Speaker 8

Oui.

01:02:54,186

Sam (Consultant)

Merci.

01:02:56,006

Speaker 8

D'accord.

01:02:56,766

Sam (Consultant)

[background chattering] Uh, Dr. Rahali said, "Do you have an estimate? How much does it cost?"

01:03:15,246

Speaker 8

Uh, this one I need to check with our electrical engineer because this is another department. I don't have a exact idea. And also this one, I cannot give you, okay, how much cost this system. You know, to discuss which function you want to do. Which function exactly.

01:03:33,446

Sam (Consultant)

Which function.

01:03:33,486

Speaker 8

Yeah, because this-

01:03:35,346

Sam (Consultant)

D'accord.

01:03:35,486

Speaker 8

-involve many, many functions, you know?

01:03:38,546

Sam (Consultant)

Understand.

01:03:38,996

Speaker 8

And for sure many function we don't need it, really.

01:03:42,465

Sam (Consultant)

Okay. We can tell you which functions and, uh,

01:03:46,366

Sam (Consultant)

and, uh... [background chattering]

01:03:50,946

Sam (Consultant)

Okay, can you send us something so we pick and choose from it, if you have some...

01:03:56,486

Speaker 8

Okay. Sure.

01:03:59,266

Speaker 8

I ask my colleague to, to give you the idea.

01:04:04,666

Sam (Consultant)

D'accord.

01:04:08,446

Sam (Consultant)

[bavardages en arrière-plan]

01:04:19,346

Speaker 8

So,

01:04:34,346

Speaker 8

uh, I just... Um, uh, he was away. I'm just, uh, uh, explaining to him what I discussed, uh, with you, uh, uh, uh, around the HVAC system. I told him that you guys are gonna send us some, uh, blueprint to, to, to work with, with the, with the HVAC company. Okay? So that's clear with Mike and, uh, all right? Software, it's clear. They're gonna send us some doc... Uh, some, uh, uh, documentation, and we're gonna see what we can do. Okay?

01:05:09,786

Speaker 8

Uh, third point. The third point.

01:05:13,306

Speaker 8

[background chattering] Okay. So Dr. Rahali when he was, when-- Or I was referring to the simulator, he wants to optimize the consumption of energy because the electrical power we have is very powerful. So we, we wanna operate in a efficient way in terms of cost of operations. You see what I'm saying?

01:05:34,676

Sam (Consultant)

Mm-hmm.

01:05:34,706

Speaker 8

Especially around energy and which, which you guys know, understand very well, right?

01:05:41,746

Sam (Consultant)

Oui.

01:05:42,946

Speaker 8

Does that make sense? So can we do that to how, how, how to operate at the optimum point with minimum consumption of energy?

01:05:55,146

Speaker 8

D'accord.

01:05:57,906

Sam (Consultant)

Yeah. Is that doable?

01:06:00,586

Speaker 8

Yeah, it's doable I think. Maybe, uh-

01:06:03,486

Sam (Consultant)

Merci.

01:06:03,496

Speaker 8

Tomorrow or after tomorrow, we can give you this answer.

01:06:07,746

Sam (Consultant)

Thank you. Thank you. Thank you.

01:06:09,546

Speaker 8

Okay. [background chattering]

01:06:14,106

Sam (Consultant)

Oh,

01:06:17,646

Sam (Consultant)

okay.

01:06:24,126

Speaker 8

Okay. So should we continue? Okay. In addition, one last point I just forgot, uh, Dr. Rahali mentioned to me. Uh, he, he wants to simulate different formulas.

01:06:36,846

Speaker 8

Uh, s- What, what do you mean, you mean... You mean save the different formula, right?

01:06:42,506

Sam (Consultant)

Oui.

01:06:44,026

Speaker 8

Yeah, this one you can save in our system and then, uh, you know, when you produce... Okay, formula A. You just choose formula A, automatic, uh, you know, produce.

01:06:53,076

Sam (Consultant)

No. We, we want to simulate.

01:06:56,466

Speaker 8

Simulate?

01:06:57,696

Sam (Consultant)

Simulate.

01:06:57,786

Speaker 8

Sorry.

01:06:59,906

Speaker 8

[laughs] What?

01:07:01,286

Sam (Consultant)

It, it... Okay. He wants to simulate different formulas digitally so he will know exactly how... [background chattering] Okay. So he want to simulate before to put it into production. Do you think... Is this doable?

01:07:18,986

Speaker 8

Simulate. You mean the test production or?

01:07:22,146

Sam (Consultant)

Not testing in, in on site.

01:07:25,626

Speaker 8

Oh, it's not real. Not real production.

01:07:29,386

Sam (Consultant)

Not real production. Not real production. Not- [background chattering] Yeah. So we, we don't wanna waste time testing, you know, this formula and stop, shut down, and then, uh, start production. Do you think...?

01:07:45,170

Mike (Famsun)

This one I don't know we can, we can do it or not.

01:07:47,450

Sam (Consultant)

We cannot do it, uh, digitally.

01:07:51,330

Sam (Consultant)

We have to do it a real production, right?

01:07:53,870

Mike (Famsun)

Yeah. I think you need to do

01:07:56,270

Mike (Famsun)

with the production.

01:07:59,090

Sam (Consultant)

[on phone] So did you-- Okay.

01:08:14,990

Sam (Consultant)

Like, uh, what I just said, he wants to simulate digitally, you know, like in a twin factory, a cert- uh, four or two to three to four, four different formulas where, uh, out, out of which, from the result of the simulator, we go, uh, with certain, with certain, uh, certainty. Okay? We, we can put it into production for testing.

01:08:41,350

Mike (Famsun)

Hmm.

01:08:43,130

Sam (Consultant)

Oui.

01:08:43,610

Mike (Famsun)

I, I never hear this before, to be frank. I never hear this before.

01:08:47,970

Sam (Consultant)

You never hear-

01:08:48,160

Mike (Famsun)

But let me check with, uh, also this kind of, uh, digital,

01:08:53,490

Mike (Famsun)

digital system.

01:08:55,230

Sam (Consultant)

Okay. Just, just-

01:08:55,850

Mike (Famsun)

Digital system.

01:08:56,670

Sam (Consultant)

Okay. We're just, we're just exploring, uh, what Dr RAHALI wants to do, you know, efficiently.

01:09:03,390

Mike (Famsun)

Oui.

01:09:03,400

Sam (Consultant)

All right? Again, we're working, uh, we're talking about efficiency here and, uh, and minimizing risk of waste of time and cost and so on. Okay? So if it's doable, since we are partners, you know?

01:09:15,210

Mike (Famsun)

Oui.

01:09:15,330

Sam (Consultant)

If it's doable, I can have a-

01:09:16,790

Mike (Famsun)

Anything we can do. Yeah, we try to do it. Why not?

01:09:20,270

Sam (Consultant)

Okay. So, uh, exactly. So if it's doable, check with your team, you know, come back to us, what we can do or how we can do it differently or close to it, at least we'll be, uh, more efficient than doing it, uh, in a real production.

01:09:37,170

Mike (Famsun)

Hmm. D'accord.

01:09:38,810

Sam (Consultant)

Does that make sense?

01:09:41,050

Mike (Famsun)

Yeah, yeah. It makes sense. Yeah.

01:09:43,860

Sam (Consultant)

D'accord.

01:09:43,870

Mike (Famsun)

Doctor have a, always have a new idea, really.

01:09:46,990

Sam (Consultant)

Yeah. He has always... He, he lives, he lives in another dimension. [laughing]

01:09:52,990

Mike (Famsun)

Yeah, yeah. Doctor, really, doctor, sometimes his idea even more advanced than the manufacturer.

01:09:58,910

Sam (Consultant)

Yes. Like he wants, he wants a, he wants ma- he wants a, a factory, a smart fa- a smart manufacturer.

01:10:06,670

Mike (Famsun)

Hmm.

01:10:07,070

Sam (Consultant)

And I'm sure-

01:10:07,910

Mike (Famsun)

Oui.

01:10:08,050

Sam (Consultant)

And, and you... And I'm sure you can do it. I saw it on your website.

01:10:12,170

Mike (Famsun)

Yeah. Smart manufacturer. I, as I mentioned, you need to design from beginning. You know, add the function-

01:10:18,150

Sam (Consultant)

D'accord.

01:10:18,670

Mike (Famsun)

It's not easy, really. It's, uh... [laughing] It's because it's not only software. Because it's involved-

01:10:25,170

Sam (Consultant)

I understand.

01:10:25,190

Mike (Famsun)

Both software and hardware. Yeah.

01:10:27,790

Sam (Consultant)

Yeah. It's hardware, you know, sensors and so on.

01:10:30,890

Mike (Famsun)

Yeah, yeah. Yeah.

01:10:31,910

Sam (Consultant)

We're just, we're just inquiring. Um, we just, uh, we-

01:10:37,490

Mike (Famsun)

Exact.

01:10:39,610

Sam (Consultant)

[on phone] Okay.

01:10:48,530

Sam (Consultant)

Exactly. Uh, four point, four point zero. Okay, so what he say, he's just exploring options with you guys because he, he trusts you and he knows you guys are very smart and, uh, have a good reputation to, uh, especially if it, if, if, if you can get close to it with the existing equipment, that's fine. Even thirty, forty percent to it. But, uh, he's gonna start a, a second line, and he wants to build it, you know, uh-

01:11:18,590

Mike (Famsun)

Intelligent.

01:11:20,290

Sam (Consultant)

Exactly. Thank you, man.

01:11:23,190

Mike (Famsun)

[rises]

01:11:24,670

Sam (Consultant)

So...

01:11:26,390

Mike (Famsun)

Oui.

01:11:26,590

Sam (Consultant)

[on phone] Yeah.

01:11:31,230

Sam (Consultant)

Yeah. So he trust... [on phone] Exactly. So he, he's just trying avoiding any future issues and, uh, have, make it, uh, as much as possible automated. You know what I'm saying?

01:11:43,970

Mike (Famsun)

Oui.

01:11:44,730

Sam (Consultant)

Uh, and, and also for him to, to,

01:11:49,970

Sam (Consultant)

you know, to succeed together. We are, we are in, we are in this project together, as he mentioned, and, uh, and he knows that, uh, you know-

01:11:59,930

Mike (Famsun)

Hello?

01:12:00,230

Sam (Consultant)

You, you, you have solutions, and you can come up with solutions.

01:12:03,510

Mike (Famsun)

Ah.

01:12:04,010

Sam (Consultant)

And, uh...

01:12:06,340

Mike (Famsun)

[on phone]

01:12:07,170

Sam (Consultant)

Yeah. He said he... [laughing] He said he cannot, uh, supervise, uh, one Meraki with another Meraki on each machine. [laughing] He, he wants, he wants to minimize the human error in another way.

01:12:24,610

Mike (Famsun)

Yeah. Understand. In Morocco it's difficult.

01:12:28,150

Sam (Consultant)

Oui.

01:12:28,650

Mike (Famsun)

And I, I suggest we need to run the recent factory first to bring profit to PET factory.

01:12:37,250

Sam (Consultant)

Oui.

01:12:37,290

Mike (Famsun)

Then we...

01:12:39,090

Mike (Famsun)

Yeah, without success in the first one, we cannot plan for. So we must try our best to, to make, uh, first factory a success. Then very fast we can do the second one with the different level.

01:12:53,070

Sam (Consultant)

[on phone]

01:12:58,290

Sam (Consultant)

Okay. He, he, he's just, uh, uh, uh, asking if you can, uh, you know, uh, focus on, uh, on the items we discussed in this meeting and, uh, and, uh, so we can move forward to production, as you said.

01:13:20,850

Mike (Famsun)

D'accord.

01:13:24,019

Sam (Consultant)

[on phone] Yeah. Yeah. Yeah, he's just concerned about the quality of the pro- uh, product and the lifetime, and the shelf lifetime of the bags, you know?

01:13:35,410

Sam (Consultant)

Uh, so it, it won't, it won't perish, uh, in less than eighteen months. Yeah. Yeah. This, uh, the, uh-- Yeah. So...

01:13:48,251

Sun Laoshi (Ingénieur CN)

[au téléphone]

01:13:50,042

Sam (Consultant)

So he's just concerned about the quality and the li-- its shelf lifetime of the product.

01:13:54,422

Sun Laoshi (Ingénieur CN)

Oui.

01:13:55,022

Sam (Consultant)

So he want perish like to-

01:13:57,262

Sun Laoshi (Ingénieur CN)

I'm, I'm thinking because, uh, Cobac now is, uh, producing in, uh, in Agadir, and I think Agadir has a little bit similar like Marrakesh with the humidity, high temperature. No?

01:14:11,402

Sam (Consultant)

Definitely.

01:14:12,342

Sun Laoshi (Ingénieur CN)

I studied the weather in Agadir and, uh, Cobac, and me, it's different. Okay.

01:14:18,542

Sam (Consultant)

Different. Agadir is more... Agadir is humid.

01:14:21,422

Sun Laoshi (Ingénieur CN)

We don't have, uh, the same temperature. We don't have, uh-

01:14:25,062

Sam (Consultant)

Yeah, it doesn't go up to fifty degrees, and it, uh, and they have humidity.

01:14:31,202

Sun Laoshi (Ingénieur CN)

Oh, okay. Different.

01:14:33,762

Sun Laoshi (Ingénieur CN)

Different. Yes.

01:14:34,542

Sam (Consultant)

I see. Okay.

01:14:37,722

Sun Laoshi (Ingénieur CN)

Uh, the display-

01:14:38,582

Sam (Consultant)

Anyway.

01:14:39,162

Sun Laoshi (Ingénieur CN)

-is be- is better if you, if you manage the ambiance of the... It's better. Okay.

01:14:45,082

Sam (Consultant)

Oui.

01:14:46,262

Sun Laoshi (Ingénieur CN)

I think, I think, uh-

01:14:46,492

Sam (Consultant)

I think the Marrakesh is better with, uh-

01:14:48,832

Sun Laoshi (Ingénieur CN)

Oui.

01:14:48,832

Sam (Consultant)

-if you reduce the temperature. It's dry and, uh-

01:14:51,722

Sun Laoshi (Ingénieur CN)

Exactly. Exactly.

01:14:53,932

Sam (Consultant)

Oui.

01:14:53,982

Sun Laoshi (Ingénieur CN)

And, and we don't trust what- In, in Rabat, in Rabat is, is not good. You have a lot of humidity. Okay.

01:15:01,062

Sam (Consultant)

Yeah. Yeah. True. Marrakesh is very comfortable. You know, in the, in the summer I was there really very, very comfortable. Very comfortable. I don't feel very hot, really.

01:15:11,782

Sun Laoshi (Ingénieur CN)

Here now the problem is that you have three months, okay, with the, with the higher temperature. Okay. With hundred. You must, you must to study normally the, the, the minimum control, human control. Okay? And the, and the I, I, I organize, uh, am-ambiance, ambiance temperature. If you want to make something, you to make something this place and for have, uh, uh, uh, [on the phone] production, production correct.

01:15:43,422

Sam (Consultant)

Yeah. He said he, he, he wants to... A-as I mentioned earlier, he doesn't wanna rely on the human factor, on the technicians on the floor because he forgot to adjust the machine or, or something. So, uh, he wants to, uh, like oil change or, uh, a-any other parameter that the technician, that ne- that technician needs to do manually. So he wants a-as much, uh, uh, uh... He wants assurance that production line, uh, uh, operates in the, in the, uh, in the optimum, uh, uh, area.

01:16:24,282

Sun Laoshi (Ingénieur CN)

Hmm.

01:16:25,782

Sun Laoshi (Ingénieur CN)

Understand. Humidity, temperature.

01:16:30,982

Sun Laoshi (Ingénieur CN)

This is the two points is, uh, very important in the-

01:16:34,242

Sam (Consultant)

Yeah. Yeah. He said those two parameters-

01:16:36,482

Sun Laoshi (Ingénieur CN)

For this, uh, uh, for this, uh, manufacturer.

01:16:40,822

Sam (Consultant)

For... Okay.

01:16:41,402

Sun Laoshi (Ingénieur CN)

Oui.

01:16:41,602

Sam (Consultant)

For-- In terms of product quality, he said temperature and the humidity-

01:16:46,162

Sun Laoshi (Ingénieur CN)

Humidity. Yes.

01:16:46,171

Sam (Consultant)

-are the main two parameters to monitor and control to have a good, uh, cable.

01:16:51,522

Sun Laoshi (Ingénieur CN)

Big ships. For export and trusting and such thing.

01:16:53,942

Sam (Consultant)

Yeah, yeah.

01:16:54,982

Sun Laoshi (Ingénieur CN)

All, all, all.

01:16:56,152

Sam (Consultant)

So I-

01:16:56,212

Sun Laoshi (Ingénieur CN)

I have lot of order. I can make lot of order from Europe, from USA. Okay. I know, uh, what, uh, what, what I talk. Okay. I know me. So maybe you don't know me. [laughs] I know me. Fine. Okay. But I, uh, I receive a lot of, uh, big, uh, big, uh, buyer from, uh, from, uh, from, uh, uh, [on the phone] chain, chain the magasins. Chain.

01:17:23,042

Sam (Consultant)

Uh, like, uh, uh-

01:17:25,502

Sun Laoshi (Ingénieur CN)

Carrefour. Carrefour, Carrefour Fresh, lot of shop. And if I have all is tracking, tracking, um, uh, process is okay. You don't have, um, machine learning for automatization or cable. Uh, you can add this complicates for you. I'm,

01:17:45,082

Sun Laoshi (Ingénieur CN)

uh, [on the phone]

01:17:47,862

Sam (Consultant)

Uh, sorry.

01:17:48,882

Sun Laoshi (Ingénieur CN)

I am sorry. I am sorry because normally you can have, uh-

01:17:52,192

Sam (Consultant)

Non, non.

01:17:52,562

Sun Laoshi (Ingénieur CN)

Uh, you can make, uh, something added just for, uh... If you can quickly... Uh, you have lot of cable. I, I study your cable. Uh, uh, your, your capture, capture your-

01:18:04,682

Sam (Consultant)

Sensors.

01:18:05,322

Sun Laoshi (Ingénieur CN)

Oui.

01:18:05,902

Sam (Consultant)

Sensors.

01:18:06,602

Sun Laoshi (Ingénieur CN)

Your sensor. Your-

01:18:07,522

Sam (Consultant)

Oui.

01:18:08,102

Sun Laoshi (Ingénieur CN)

Uh, you receive lots of information about Micos. But if you can add something, the, the, the plus something like, uh, the plus-

01:18:15,702

Sam (Consultant)

Yeah. If you have another on top of Micos.

01:18:18,282

Sun Laoshi (Ingénieur CN)

For optimization.

01:18:19,542

Sam (Consultant)

For optimization.

01:18:20,622

Sun Laoshi (Ingénieur CN)

Not all. Not all.

01:18:21,852

Sam (Consultant)

Not all end to end. At least some.

01:18:23,552

Sun Laoshi (Ingénieur CN)

For one year or for one year.

01:18:25,232

Sam (Consultant)

Oui.

01:18:25,302

Sun Laoshi (Ingénieur CN)

One and a half. Okay. Let's see now is this for the good production.

01:18:30,842

Sam (Consultant)

Oui.

01:18:31,442

Sun Laoshi (Ingénieur CN)

And the second time for optimization and, uh, for economic, uh, you understand me? Uh, if you-

01:18:39,022

Sam (Consultant)

Oui.

01:18:39,292

Sun Laoshi (Ingénieur CN)

-have a program. If I have success, I have money, I can pay you. [laughs] If you have success, I can... You know me, I can sell in Morocco. I have lot of, uh, uh, shop I work with here. Okay?

01:18:53,382

Sam (Consultant)

Oui.

01:18:53,882

Sun Laoshi (Ingénieur CN)

I-

01:18:54,182

Sam (Consultant)

Oui.

01:18:54,782

Sun Laoshi (Ingénieur CN)

I, I can have a, I can have a contract with manager for private label with the, uh, all is and, and for export. You must have quality. You don't have problem from the first purchase. The problem, the problem is, problem is not in the, in, in the warehouse. When you sell, when you sell,

01:19:16,382

Sun Laoshi (Ingénieur CN)

stuff arrive and stay. In, at the first time the, the, the, the cable can, can be-

01:19:22,662

Sam (Consultant)

Cable. Cable.

01:19:23,072

Sun Laoshi (Ingénieur CN)

Cable. The cable is good. But if you have maybe see two, three, four months you have some, some, uh, white, white, uh, white part in the cable. Okay? It's not the, the, the first time. Okay. And what, what about after I tell you, "Oh, I don't have a good line. I don't have a... I don't... I have a problem. I cannot sell." Now-

01:19:44,402

Sam (Consultant)

Hmm.

01:19:44,842

Sun Laoshi (Ingénieur CN)

-my, my analysis, okay, with Mr. Sam is, uhl don't want problem. Uh, uh, problem a bit, bit.

01:19:55,482

Speaker 9

Uh, like a stupid, uh-

01:19:57,202

Sun Laoshi (Ingénieur CN)

Stupid problem. I don't want stupid problem. Okay.

01:20:00,702

Speaker 9

Mm. Yeah.

01:20:02,302

Sun Laoshi (Ingénieur CN)

I, I, I have... I, I, I ha-- It's sure I have a pro-a pro-a problem in my-

01:20:07,962

Speaker 9

Hmm.

01:20:07,992

Sun Laoshi (Ingénieur CN)

Of my factory. But not stupid problem. You understand?

01:20:12,162

Speaker 9

Mm. Yeah. Not a, not a simple issue make a problem.

01:20:16,312

Sun Laoshi (Ingénieur CN)

Exactement.

01:20:17,502

Speaker 9

Oui.

01:20:17,642

Sun Laoshi (Ingénieur CN)

Yeah, and a, and a, it's this big problem for, for, uh, for marketing, for manufacturer, for, uh, for pet factory, for, for pet factory, for, for line, uh, pumps on. Uh, now we are, we are married for this success, you know.

01:20:33,162

Speaker 9

Mm-hmm. Yes. [chuckles]

01:20:34,522

Sun Laoshi (Ingénieur CN)

If this stuff I can finance all another company and other manufacturer in, uh, Africa and, uh... You know me, I dream.

01:20:43,542

Speaker 9

Oui.

01:20:43,742

Sun Laoshi (Ingénieur CN)

D'accord.

01:20:44,562

Speaker 9

I know you. You can-

01:20:46,382

Sun Laoshi (Ingénieur CN)

Oui.

01:20:46,392

Speaker 9

You can expand very fast. I believe, really. You can expand fast.

01:20:51,102

Sun Laoshi (Ingénieur CN)

Okay. Now for me, for me, if everything is okay, this line in one years

01:20:57,302

Sun Laoshi (Ingénieur CN)

is, is finished capacity. You know?

01:21:02,162

Speaker 9

Yeah. You, you need another one.

01:21:03,862

Sun Laoshi (Ingénieur CN)

We are now focused on enemy and the situation markets in Morocco, we are, I think, the leader in, in, in the market. And with the right wood, you can, you can, you can have a lot of foreign, okay, if you have a good quality. Okay.

01:21:21,442

Speaker 9

Hmm.

01:21:22,082

Sun Laoshi (Ingénieur CN)

And if you have something, one, one order is not okay because, uh, temperature, uh, is, is, is, is, is, is, uh, broken success. Okay.

01:21:32,442

Speaker 9

Yeah, yeah.

01:21:33,172

Sun Laoshi (Ingénieur CN)

And-

01:21:33,222

Speaker 9

Your reputation break.

01:21:35,062

Sun Laoshi (Ingénieur CN)

Yes. It is critical, uh, period. Uh, I think for sake, uh, I am, uh, very, very stressed. I have a lot of stress because I don't want, uh, something, uh, stupid, something about it. And I talk with you and, uh, with Sam, and nobody know in my, my, my team did this discussion. Okay.

01:21:57,202

Speaker 9

Oh, okay. Understand.

01:21:58,502

Sun Laoshi (Ingénieur CN)

Oui.

01:21:59,262

Speaker 9

You don't talk to others. Yeah.

01:22:01,142

Sun Laoshi (Ingénieur CN)

Uh, yes. I told you, uh, this last time is confidential, okay? Because-

01:22:05,802

Speaker 9

Yeah, yeah.

01:22:06,051

Sun Laoshi (Ingénieur CN)

I don't want-

01:22:06,422

Speaker 9

Sure.

01:22:06,982

Sun Laoshi (Ingénieur CN)

I have a lot of analyses and document about this problem. Now, about this problem that happened. It's a real problem. Okay?

01:22:16,102

Speaker 9

Hmm.

01:22:16,962

Sun Laoshi (Ingénieur CN)

Real problem. Uh, your... I don't know. Uh, I go with you in Turkish and you have... It's hot and you have a temperature in manufacture. It's okay. It's okay. But you have some segment, some segment, okay, is, uh, you must manage

01:22:34,602

Sun Laoshi (Ingénieur CN)

for, uh, for know how one country go in Europe and they come back in Morocco. Okay?

01:22:41,762

Speaker 9

Hmm.

01:22:41,772

Sun Laoshi (Ingénieur CN)

Uh, one, one delivered in Tangier for five hundred dol- five hundred dollar transport, seven hundred dollar one container for one, one, one customer, and you have a problem.

01:22:54,862

Speaker 9

Hmm.

01:22:55,002

Sun Laoshi (Ingénieur CN)

Because the moisture, the moisture. Moisture?

01:23:00,262

Speaker 9

Mm. Moisture.

01:23:00,611

Sun Laoshi (Ingénieur CN)

Moisture.

01:23:00,611

Speaker 9

Moisture.

01:23:00,862

Sun Laoshi (Ingénieur CN)

It- it- it look the moisture. You look the moi-- Two, three months after packaging.

01:23:08,202

Speaker 9

Oui.

01:23:09,262

Sun Laoshi (Ingénieur CN)

You don't look the moisture in the, uh, when you finish your packaging.

01:23:12,662

Speaker 9

In the beginning. Yeah. Yeah, yeah.

01:23:14,611

Sun Laoshi (Ingénieur CN)

Yes. This is the problem.

01:23:16,802

Speaker 9

Yes, I know. I know, yeah.

01:23:18,022

Sam (Consultant)

You know, you know the term, you know the term garbage in, garbage out?

01:23:23,522

Speaker 9

Mm, the which one?

01:23:25,762

Sam (Consultant)

You know, you know this saying? It's an American saying. Garbage in, garbage out.

01:23:31,142

Speaker 9

[laughs] Yes.

01:23:33,182

Sam (Consultant)

We don't know. That's why I try to avoid. [laughs]

01:23:37,802

Sun Laoshi (Ingénieur CN)

Yeah, yeah. This is the, uh, Mike, good. You must analyze the environment, proposition, automatization, proposition, uh, management, um, um, um, uh, construction, something. Okay. You provide-- could have a line, uh, turnkey-

01:23:55,102

Sam (Consultant)

Oui.

01:23:55,252

Sun Laoshi (Ingénieur CN)

Without stupid work, and you can-- I can sell lot of with good quality.

01:24:01,462

Speaker 9

Hmm.

01:24:02,862

Sun Laoshi (Ingénieur CN)

This is my... If you have some problem, I cannot sell. In Morocco, it talk a lot of... It talk a lot of here.

01:24:10,542

Speaker 9

Hmm.

01:24:10,801

Sam (Consultant)

So reputation in another way.

01:24:12,722

Sun Laoshi (Ingénieur CN)

It talk a lot of... It's a, it's a, it's a-

01:24:15,192

Speaker 9

Oh, yeah.

01:24:15,962

Sun Laoshi (Ingénieur CN)

Better than-

01:24:16,402

Speaker 9

Now in this, uh-

01:24:17,522

Sun Laoshi (Ingénieur CN)

Better than TikTok.

01:24:18,662

Speaker 9

More than TikTok.

01:24:19,502

Sun Laoshi (Ingénieur CN)

More than TikTok. Okay.

01:24:21,202

Speaker 9

Hmm.

01:24:22,142

Sun Laoshi (Ingénieur CN)

And the, the first problem with the moisture of intoxication, hot dogs, uh,

01:24:29,802

Sun Laoshi (Ingénieur CN)

uh,

01:24:31,282

Sun Laoshi (Ingénieur CN)

there is, uh, uh, it's, it's grave. It is, uh, it's a catastrophic.

01:24:36,622

Sam (Consultant)

Yeah, it's a catastrophic.

01:24:38,082

Sun Laoshi (Ingénieur CN)

Uh, d'accord.

01:24:39,942

Sam (Consultant)

Oui.

01:24:40,352

Sun Laoshi (Ingénieur CN)

But still-

01:24:40,382

Sam (Consultant)

And now no mistake. No mistake allowed. I know.

01:24:43,222

Sun Laoshi (Ingénieur CN)

Exactement.

01:24:44,502

Sam (Consultant)

Hmm.

01:24:44,902

Sun Laoshi (Ingénieur CN)

Exactement.

01:24:45,422

Speaker 9

Yes. Okay. I like this, but [laughs] uh-

01:24:49,582

Sam (Consultant)

Oui.

01:24:49,702

Speaker 9

Look, I, I want solution. Uh,

01:24:52,942

Speaker 9

So-

01:24:52,962

Sam (Consultant)

Yeah, doctor, don't worry. We are with you, okay? Together we improve whatever we can.

01:24:58,402

Sun Laoshi (Ingénieur CN)

I talk with, uh, Sam. Sam Song and Mike is, uh-

01:25:02,202

Sam (Consultant)

Oh, he talked so, uh, so much about you guys. He told me, uh-

01:25:05,702

Speaker 9

[rises]

01:25:06,262

Sam (Consultant)

You know, Sam Song, I have the best partners and, uh, I did my research and I told him you have the best equipment. I agree with him.

01:25:13,042

Speaker 9

[laughs] Thank you, Dr. Leonid. And, uh, I-

01:25:17,902

Sun Laoshi (Ingénieur CN)

[in French]

01:25:19,142

Sam (Consultant)

Okay. Yeah, we just, uh, you know, uh, this-- the purpose of this meeting is just to... It's more a risk mitigation. You see what I'm saying? So we're just collaborating with you guys to avoid any unexpected or, uh, or any surprises in the future. That's it.

01:25:39,402

Speaker 9

Mm-hmm. I, I understand, yeah.

01:25:42,382

Sam (Consultant)

Yeah. He said that, uh, you know, uh, Smittom?

01:25:45,441

Sun Laoshi (Ingénieur CN)

[in French]

01:25:47,002

Sam (Consultant)

Yeah, the consult-- engineer consult-- Moroccan engineer consulting company. I think you, you know about them, right?Uh, no, I-

01:25:59,198

Speaker 9

No, there is a company in Morocco that did the, the, the, the... What do you call it? The, the project, uh, the project, uh, evaluation for the architecture of the building.

01:26:13,398

Sam (Consultant)

Ah, okay.

01:26:16,958

Speaker 9

Eh, eh, excuse me?

01:26:19,418

Speaker 9

Uh, Mike.

01:26:21,098

Sam (Consultant)

Oui.

01:26:22,218

Speaker 9

Uh, you know, someone here, he check your document about authorization in Morocco and, uh, you know.

01:26:27,758

Sam (Consultant)

That company, right? Oh, yeah, yeah. I, I know. Yes.

01:26:32,018

Speaker 9

Remember, remember for the metal, you must to add something.

01:26:34,078

Sam (Consultant)

Oh, for the structure. Yes. Yeah, yeah.

01:26:36,578

Speaker 9

For all. Structure, for, for climatization.

01:26:40,658

Sam (Consultant)

D'accord.

01:26:41,138

Speaker 9

For all.

01:26:42,518

Speaker 9

He sent me the model.

01:26:45,938

Sam (Consultant)

Yeah, they did the-

01:26:47,998

Speaker 9

But it's not for pet food.

01:26:50,458

Sam (Consultant)

Okay. We have, we confirmed with this company,

01:26:54,498

Sam (Consultant)

all right? With, uh, who did, who did the,

01:26:58,778

Sam (Consultant)

the, the study of the project, especially when it comes to the HVAC system. And they confirmed they, they did it just, uh, as if, if the

building was a warehouse, not a factory.

01:27:15,138

Speaker 9

Mm-hmm. Okay.

01:27:16,218

Sam (Consultant)

So the HVAC system they designed is not for a factory, it's for a warehouse.

01:27:22,378

Speaker 9

Warehouse, okay.

01:27:24,658

Speaker 9

I see.

01:27:26,138

Speaker 9

It's not professional. And you know, he put it, uh, something for climatizer. Maybe it's ten thousand dollar every month. [chuckles]

01:27:34,838

Sam (Consultant)

Of electrical consumption.

01:27:36,558

Speaker 9

The minimum. Eh, and the ambiance not, not correctly. Yeah. Okay. And I want something also. Also, why in the warehouse you put it, the, the, the, uh, the pot?

01:27:47,798

Sam (Consultant)

Oh, yeah. He's a-- He has a question. You see how many doors do we have in the warehouse? There are multiple doors.

01:27:55,998

Sam (Consultant)

The sliding door.

01:27:58,258

Speaker 9

Yes. We have, uh, many, yes. I think it's two. Two or three, right?

01:28:04,798

Sam (Consultant)

No,

01:28:06,418

Sam (Consultant)

it, it is more.

01:28:08,688

Speaker 9

More?

01:28:10,078

Speaker 9

The door, not window.

01:28:12,738

Sam (Consultant)

What?

01:28:13,878

Speaker 9

Not window. You have, uh, window slide.

01:28:16,198

Sam (Consultant)

I'm not talking about windows. We're talking about the sliding doors.

01:28:20,278

Speaker 9

Ah. There are many, many doors.

01:28:22,798

Sam (Consultant)

Yeah. Why, why did they put the... Why did they put these doors? Is there a reason?

01:28:28,658

Speaker 9

Yeah, the door, normally for moving material in and out.

01:28:33,198

Sam (Consultant)

No, there is no door for moving material in and out, but there are doors in the back of the factory. There's like one, two, three, four, five.

01:28:42,778

Speaker 9

Really? Many doors.

01:28:44,538

Sam (Consultant)

Many doors. Well, you, you, you built the factory. [laughs] You didn't see them?

01:28:49,218

Speaker 9

Is it, uh, is it for loading the, the finished product?

01:28:53,158

Sam (Consultant)

No, no, no, no, no, no.

01:28:54,278

Speaker 9

You can load the warehouse. It's crazy. You cannot, you cannot manage the, the climatization. So they have lot of this heat.

01:29:03,078

Sam (Consultant)

Yeah. Uh, there is like... We, we, uh, we, uh, we need to isolate the doors, especially in the area of finished, finished goods.

01:29:10,998

Sam (Consultant)

In the stocking, the storage area for the, the final products. There are like one, two, three, four, five. Okay, just for the dry area, there's like about four doors.

01:29:23,798

Speaker 9

So we need to close some door.

01:29:26,638

Sam (Consultant)

Exactly. Check, check the blueprint and you're gonna understand.

01:29:30,718

Sam (Consultant)

D'accord.

01:29:32,498

Sam (Consultant)

Yeah. It, it will be, uh, difficult to contain the area, you know, in the ambient, uh, temperature, uh, since we have doors. So there will be like some air coming in. Hot air when it's hot or cool air when it's cool.

01:29:50,278

Sam (Consultant)

Yeah. And the dust too.

01:29:53,058

Speaker 9

Oui.

01:29:54,398

Speaker 9

True.

01:29:56,198

Speaker 9

I, I checked the warehouse during.

01:29:58,738

Sam (Consultant)

Yeah. Check, check, uh, yeah. Check the blueprints of the warehouse and you're gonna see. Uh, he-- We didn't understand why they put so many doors. I think they, they thought it's for, uh, for shipping, for the loading, unloading. Yeah, but the shipping area has already, uh, has already its doors.

01:30:18,818

Speaker 9

Two key.

01:30:20,138

Sam (Consultant)

Yeah, two key, uh, main, uh, two-

01:30:23,098

Speaker 9

For, for, uh-

01:30:23,898

Sam (Consultant)

Two loading areas and unloading area. Two loading areas. One for dry, one for wet. But then the other side of the warehouse, in the backside, there are like two, two to three doors. But he, he's just, uh, inquiring what was the reason for these doors. Is it for evacuation or what is it?

01:30:41,718

Speaker 9

Okay, I, I check. I check with, uh, my eng-- our engineer. Yeah.

01:30:46,798

Sam (Consultant)

Okay. So are we in an agreement now while we are nervous? [laughs]

01:30:53,018

Speaker 9

Yeah. Already I write down all the points, and, uh, we will reply to you with file. Yeah.

01:30:58,838

Speaker 9

The official document.

01:31:00,678

Sam (Consultant)

Yeah. You're gonna send us an email and, uh-

01:31:03,458

Speaker 9

Yeah. I send you email or by WhatsApp. By email is better, I think.

01:31:08,518

Sam (Consultant)

Yeah, your email. I'm gonna send you my email too. Can you CC me?

01:31:13,558

Speaker 9

Yeah. I think you sent me before, right? Or...

01:31:17,758

Sam (Consultant)

No. I never, uh, sent you an email.

01:31:21,538

Speaker 9

Okay, you can write to me. M-I-K-E,

01:31:25,198

Speaker 9

at hotmail.com.

01:31:25,448

Sam (Consultant)

Okay. I got... I have your email. I'm gonna email you right now. Right after the meeting.

01:31:30,238

Speaker 9

Oh, okay. Okay. Okay.

01:31:35,658

Sam (Consultant)

So we, we, we're looking forward for your, uh, responses and, uh, what I say, doctor?

01:31:46,198

Sam (Consultant)

Yeah. Uh, what we-

01:31:48,818

Speaker 9

Oui.

01:31:48,908

Sam (Consultant)

Oui.

01:31:53,458

Sam (Consultant)

So, uh, we're looking forward for your, uh, responses and, uh-Uh, all the points we discussed and also the roadmap, uh, for the what need- what needs to be done.

01:32:05,986

Sam (Consultant)

Okay? And, uh-

01:32:08,806

Mike (Famsun)

D'accord.

01:32:10,466

Sam (Consultant)

Okay?

01:32:10,506

Mike (Famsun)

D'accord.

01:32:11,846

Mike (Famsun)

Okay, Sam.

01:32:12,366

Sam (Consultant)

Awesome.

01:32:12,726

Mike (Famsun)

Okey-doke. Yeah.

01:32:13,986

Sam (Consultant)

Well, thank you so much, uh, for your time. I really appreciate this meeting. It was very constructive.

01:32:19,106

Mike (Famsun)

Appreciate it. Yeah, thanks.

01:32:19,606

Sam (Consultant)

You know, no hard feelings. [laughing]

01:32:22,466

Mike (Famsun)

[laughing] But, uh, doctor, we need to do faster, really. Start fast. Otherwise, the-

01:32:28,806

Sam (Consultant)

Okay. Okay, Mike-

01:32:28,836

Mike (Famsun)

The money is, uh, yeah, is there.

01:32:31,326

Sam (Consultant)

Okay, Mike, that's why we're trying to do.

01:32:34,266

Mike (Famsun)

Mm-hmm.

01:32:34,335

Sam (Consultant)

That's why we're trying to... We're, we're trying to-

01:32:35,866

Mike (Famsun)

By the way, your, uh, the authorization already approved for everything, right? For the... I mean, we have a sign or not approved before. Now is approved or not yet?

01:32:46,296

Sam (Consultant)

I think so. Uh, doctor,

01:32:50,186

Sam (Consultant)

uh, [in foreign language]

01:32:57,166

Sun Laoshi (Ingénieur CN)

[en langue étrangère]

01:32:58,096

Sam (Consultant)

[en langue étrangère]

01:32:58,256

Sun Laoshi (Ingénieur CN)

Uh.

01:32:58,546

Sam (Consultant)

He said that, yeah, he got the authorization. Yeah. It has been approved.

01:33:02,236

Mike (Famsun)

Oh, okay.

01:33:02,706

Sam (Consultant)

Approved.

01:33:03,666

Mike (Famsun)

So it's fine.

01:33:05,446

Sam (Consultant)

He said he, he's giving you the, the-

01:33:07,965

Sun Laoshi (Ingénieur CN)

[en langue étrangère]

01:33:08,346

Sam (Consultant)

The green light to bring it. [laughing] To install it.

01:33:11,426

Mike (Famsun)

Oh, okay. [laughing]

01:33:14,026

Sam (Consultant)

Okay?

01:33:14,386

Mike (Famsun)

Okay. Yeah, yeah.

01:33:15,126

Sam (Consultant)

And then one last quick question.

01:33:18,026

Mike (Famsun)

Oui.

01:33:18,266

Sam (Consultant)

I know we discussed the, the storage of the oil, and they put it outside. You remember?

01:33:24,526

Mike (Famsun)

Oui.

01:33:24,796

Sam (Consultant)

During the meeting.

01:33:25,346

Mike (Famsun)

Oui.

01:33:26,486

Sam (Consultant)

So is it okay even if it's hot, it won't affect the quality of the oil?

01:33:31,186

Mike (Famsun)

Uh, I think we need... Maximum, we need to do the, you know, like, uh, the insulation to cover the around. So like we storage the grains, you know, in some hot area, they also do the insulation.

01:33:44,966

Sam (Consultant)

Je sais.

01:33:45,266

Mike (Famsun)

They put, uh-

01:33:46,686

Sam (Consultant)

Well, he, he... That's ig-that's Dr RAHALI, that's, uh, so he said that's exactly what he likes from you. This kind of solution. Uh, because these people have-

01:33:55,706

Sun Laoshi (Ingénieur CN)

Mike, if you don't, uh, give me permission, the, the man who put it, the oil, uh, in, uh, in, uh, fourteen, uh, temperature or fifteen.

01:34:05,636

Sam (Consultant)

Oui.

01:34:05,686

Sun Laoshi (Ingénieur CN)

Okay. And after they don't have good, uh, good, uh,-

01:34:09,206

Sam (Consultant)

Good, uh, yeah. So we did, uh... So you said, you said, uh, uh, they did insulation or is there a, uh... Do you have a specific type of, uh, container, you know?

01:34:19,026

Sun Laoshi (Ingénieur CN)

[en langue étrangère]

01:34:19,926

Sam (Consultant)

You know, just give us some, uh, some documentation, what type of container so we-

01:34:24,126

Mike (Famsun)

It's insulation.

01:34:24,335

Sam (Consultant)

We validate. We, we validate with them.

01:34:27,786

Mike (Famsun)

Pas de budget.

01:34:28,786

Sam (Consultant)

C'est quoi ?

01:34:30,266

Mike (Famsun)

Pas de budget.

01:34:31,786

Mike (Famsun)

It's insulation. Insulation.

01:34:34,596

Sam (Consultant)

Isolation ?

01:34:34,626

Mike (Famsun)

Huh? Yeah, yeah.

01:34:39,046

Sam (Consultant)

Okay. Uh, just to confirm, did you say insulation?

01:34:42,226

Mike (Famsun)

Yeah, insulation to cover a surface around. Is, uh-

01:34:46,206

Sam (Consultant)

Autour.

01:34:47,026

Mike (Famsun)

Oui.

01:34:48,446

Sam (Consultant)

Okay, good. Okay. Uh, just add that to the list. Some examples, pictures, you know, so...

01:34:54,886

Mike (Famsun)

D'accord.

01:34:55,566

Sam (Consultant)

Or some, uh, technical specification of the container.

01:35:00,166

Sam (Consultant)

So that he will, uh, validate with the, uh, with the, the, the company that will install them. You know, we, we need to double-check what, uh, anything not done by Famsun.

01:35:12,086

Mike (Famsun)

Yeah, yeah, sure.

01:35:13,546

Sam (Consultant)

D'accord maintenant ?

01:35:14,166

Mike (Famsun)

D'accord. Oui, je suis d'accord.

01:35:16,486

Sam (Consultant)

[rires]

01:35:17,166

Mike (Famsun)

Je suis d'accord.

01:35:18,706

Sam (Consultant)

D'accord. Très bien.

01:35:21,206

Mike (Famsun)

D'accord.

01:35:21,606

Sam (Consultant)

Merci. Merci.

01:35:22,986

Mike (Famsun)

Okay. Thank you, doctor. Thank you, Sam.

01:35:24,846

Sam (Consultant)

Everyone in this meeting, and, uh, we'll follow up in the

01:35:29,066

Sam (Consultant)

e-mail.

01:35:30,466

Sam (Consultant)

Yeah. He said he's relying on you.

01:35:34,026

Mike (Famsun)

Okay, doctor. I do my best. Do more than what I can do, okay? I do my best.

01:35:41,706

Sam (Consultant)

Comme toujours. [rires]

01:35:44,366

Mike (Famsun)

[rires]

01:35:44,866

Sam (Consultant)

Merci. Au revoir.

01:35:46,386

Mike (Famsun)

Thank you. Thank you, doctor. Thank you, Sam. Bye-bye.

01:35:49,895

Sam (Consultant)

Au revoir.

01:35:49,906

Mike (Famsun)

Au revoir.
